

## Mumps: Epidemiological Summary for Ontario January 1, 2017 to October 31, 2017

Increased mumps activity has been noted in several parts of North America, including Ontario. This summary reflects Ontario's mumps activity in 2017 (as of October 31, 2017) as reported in the integrated Public Health Information System (iPHIS).

### Temporal trend

Between January 1 and October 31, 2017, there have been 234 cases of mumps (217 confirmed and 17 probable) reported in Ontario. Case counts for 2017 are higher than the past eight years (Figure 1).

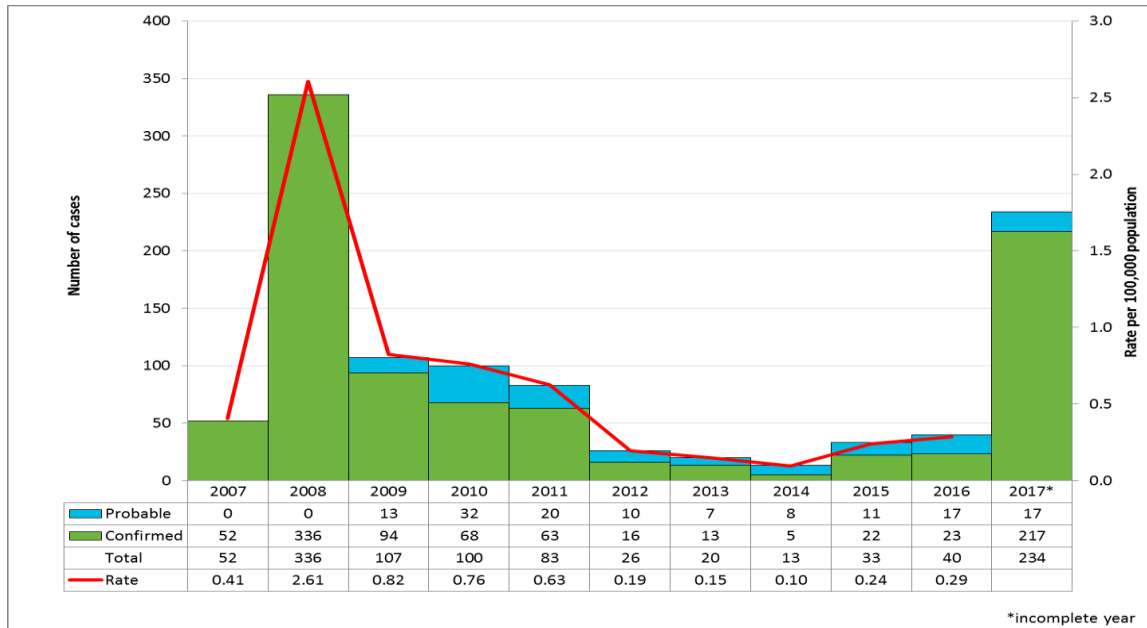

### Case details

Symptom onset dates ranged from January 9 to October 23, 2017. Cases ranged in age from eight months to 80 years, with a median of 28 years; 128 (54.7%) were male. Twenty-four cases (10.3%) occurred in children under 18 years of age. Cases were reported from 22 different public health units, with the majority of cases reported from Toronto (52.6%) and Peel (11.5%).

### Immunization status

Immunization status was unknown for 83 cases (35.5%). Of the 151 cases with known immunization status, 58 cases (38.4%) received two or more doses of measles, mumps, rubella (MMR) vaccine, 58 cases (38.4%) received one dose of MMR vaccine, and 35 cases (23.2%) were unimmunized. Among those who received two or more doses of MMR vaccine and whose administration dates were known, the interval between the last MMR dose and disease onset ranged between 2 and 23 years (median 15 years).
