

ENHANCED EPIDEMIOLOGICAL SUMMARY

Invasive Group A Streptococcal (iGAS) Disease in Ontario: October 1, 2025 to June 30, 2026

Published: July 2026

Introduction

An iGAS season is defined as the period spanning October 1 to September 30. This report summarizes the epidemiology of [Group A Streptococcal](#)¹ (iGAS) disease in Ontario from October 1, 2025 to June 30, 2026. It provides comparisons to iGAS activity in the three post-pandemic seasons (October 1, 2022 to September 30, 2025), as well as the five pre-pandemic seasons (October 1, 2014 to September 30, 2019). The report is based on information entered in the Ontario Ministry of Health (MOH) integrated Public Health Information System (iPHIS) database.

A description of iGAS activity and trends in Ontario is summarized in monthly reports and in season summaries located on the [iGAS Epidemiological Summaries](#) page.²

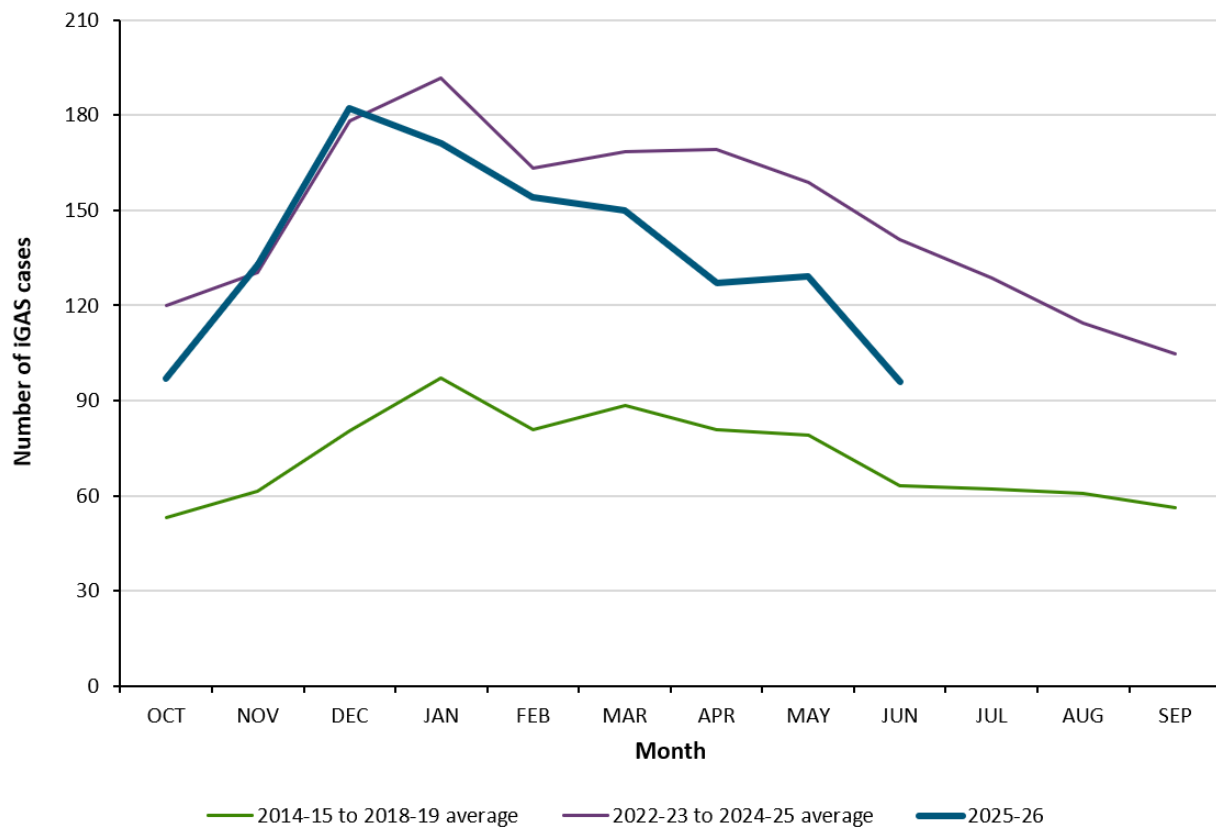

Highlights

- A total of 1,239 confirmed iGAS cases were reported in Ontario between October 1, 2025 and June 30, 2026, corresponding to an overall incidence rate of 7.5 cases per 100,000 population ([Table 1](#)).
- This represents a 14.8% reduction in the incidence rate compared to the post-pandemic average from October to June ([Table 1](#)).
- The number of cases reported between October 2025 and June 2026 was lower than or comparable to the average number of cases reported in these months in the three post-pandemic seasons, but higher than the average number of cases in the same months in the five pre-pandemic seasons ([Figure 1](#)). Case counts for the most recent month should be interpreted with caution owing to data lags.
- Three pediatric cases (under 18 years of age) were reported in June 2026, which is lower than the average number of cases reported in the pre- and post-pandemic seasons ([Figure 2](#)).
- In June 2026, rates of confirmed iGAS cases were highest in Northwestern Health Unit, Thunder Bay District Health Unit, and Lakelands Public Health ([Figure 3](#)).
- Those 65 years of age and older reported the highest incidence rate (13.9 cases per 100,000 population). Compared to the average for the three post-pandemic seasons, incidence rates this season have been lower across all age groups except those aged 14–17 years ([Table 1](#)).
- The overall proportion of iGAS cases requiring hospitalization this season to date is 81.8% compared to the post-pandemic season average of 81.0% for the same period; however interpretation of the data should consider the possible impact of lags in reporting ([Table 2](#)).

- As of June 30, 2026, eight fatal pediatric iGAS cases and 110 fatal adult iGAS cases have been reported for the current season ([Table 2](#)).
- The proportion of fatal cases among children (cases under 18 years of age) in the 2025-26 season was 10.7% (8/75) compared to 7.6% (34/446) during the same period across the three post-pandemic seasons.
- The proportion of fatal cases among adults (cases ≥ 18 years of age) in the 2025-26 season was 9.5% (110/1,164) compared to 13.0% (497/3,811) during the same period across the three post-pandemic seasons.
- Interpretation of the data should consider the possible impact of lags in reporting.
- Among iGAS cases in the 2025-26 season to date, the most commonly reported *emm* types were *emm5*, *emm59*, and *emm41* in adults and *emm4* and *emm3* in children ([Table 3](#)).
- *Emm* types were available for 74.0% of adult cases, and 57.3% of pediatric cases.
- *Emm1*, typically among the most frequently reported *emm* types in Ontario, has been found infrequently so far this season.
- These data are expected to change because *emm* types are often confirmed after initial public health notification and follow up with the case.

Trends

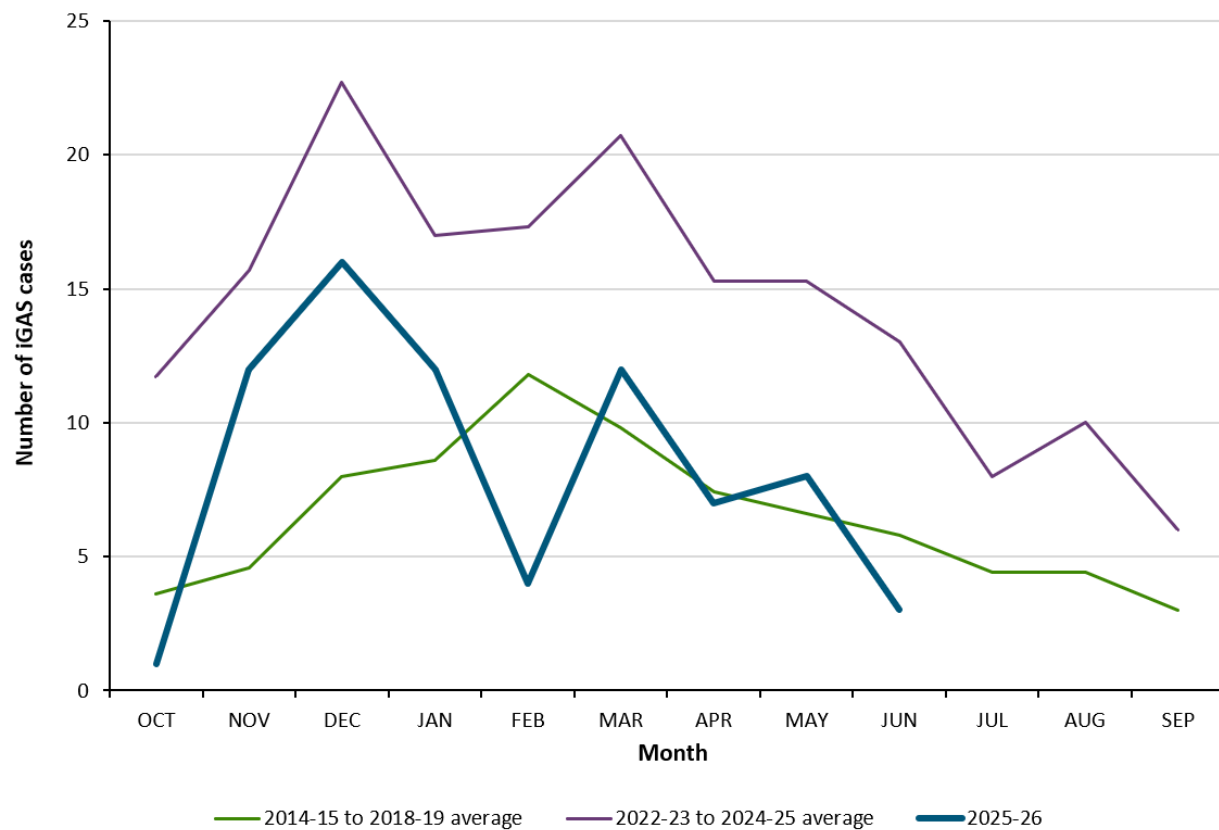

Figure 1: Confirmed iGAS Case Counts by Month for All Ages: Current Season (October 1, 2025 – June 30, 2026) Compared to the Post-Pandemic and the Pre-Pandemic Season Averages*

Data source: iPHIS

*Data for the current season (2025-2026) includes cases reported up to June 30, 2026. The three post-pandemic seasons include cases reported from October 1, 2022 to September 30, 2025. The five pre-pandemic seasons include cases reported from October 1, 2014 to September 30, 2019. Data for the most recent reporting month should be interpreted with caution due to reporting lags.

Figure 2: Confirmed iGAS Case Counts by Month in Children 0-17 Years of Age: Current Season (October 1, 2025 – June 30, 2026) Compared to the Post-Pandemic and Pre-Pandemic Season Averages*

Data source: iPHIS

*Data for the 2025-2026 season includes cases reported up to June 30, 2026. The three post-pandemic seasons include cases reported from October 1, 2022 to September 30, 2025. The five pre-pandemic seasons include cases reported from October 1, 2014 to September 30, 2019. Data for the most recent reporting month should be interpreted with caution due to reporting lags.

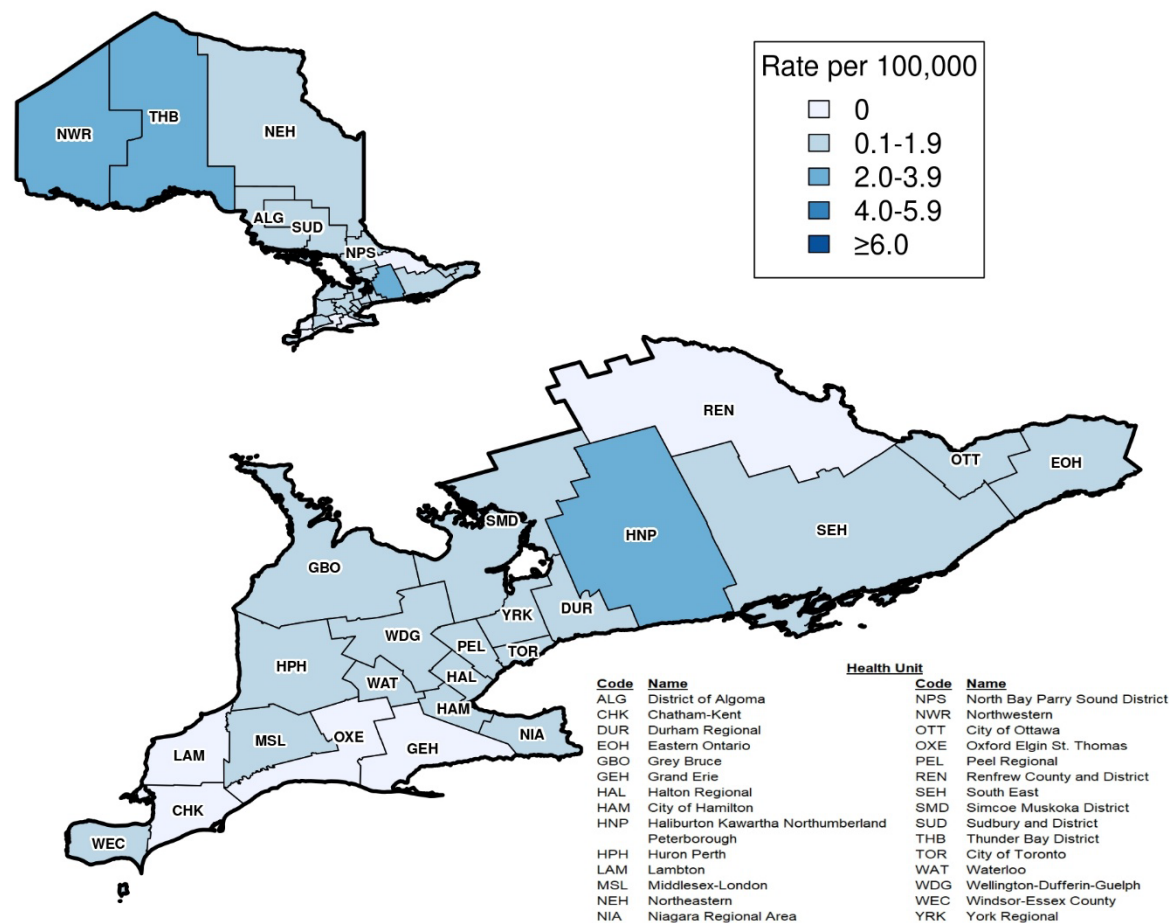

Table 1: Confirmed iGAS Cases and Rate (per 100,000 Population) by Age Group in Ontario: Current Season (October 1, 2025 – June 30, 2026) Compared to the Post-Pandemic Season Average (October 1, 2022 – June 30, 2025)*

Age Group (years)	Current season: Total number of cases reported (October 1, 2025 – June 30, 2026)	Current season: Rate per 100,000 population (October 1, 2025 – June 30, 2026)	Post-pandemic season: Average number of cases reported (October 1, 2022 – June 30, 2025)	Post-pandemic season: Average rate per 100,000 population (October 1, 2022 – June 30, 2025)	Percentage change in current season rate compared to post-pandemic season average
< 1	5	3.5	14.3	10.3	-66.0%
1 – 4	22	3.8	50.7	8.8	-56.8%
5 – 9	27	3.4	54.0	6.7	-49.3%
10 – 13	9	1.3	19.7	3.0	-56.7%
14 – 17	12	1.7	10.0	1.5	+13.3%
18 – 64	725	6.9	782.0	7.6	-9.2%
≥ 65	439	13.9	488.3	16.5	-15.8%
Unknown	0	N/A	1.0	N/A	0.0%
Total	1,239	7.5	1,420	8.8	-14.8%

Data source: iPHIS

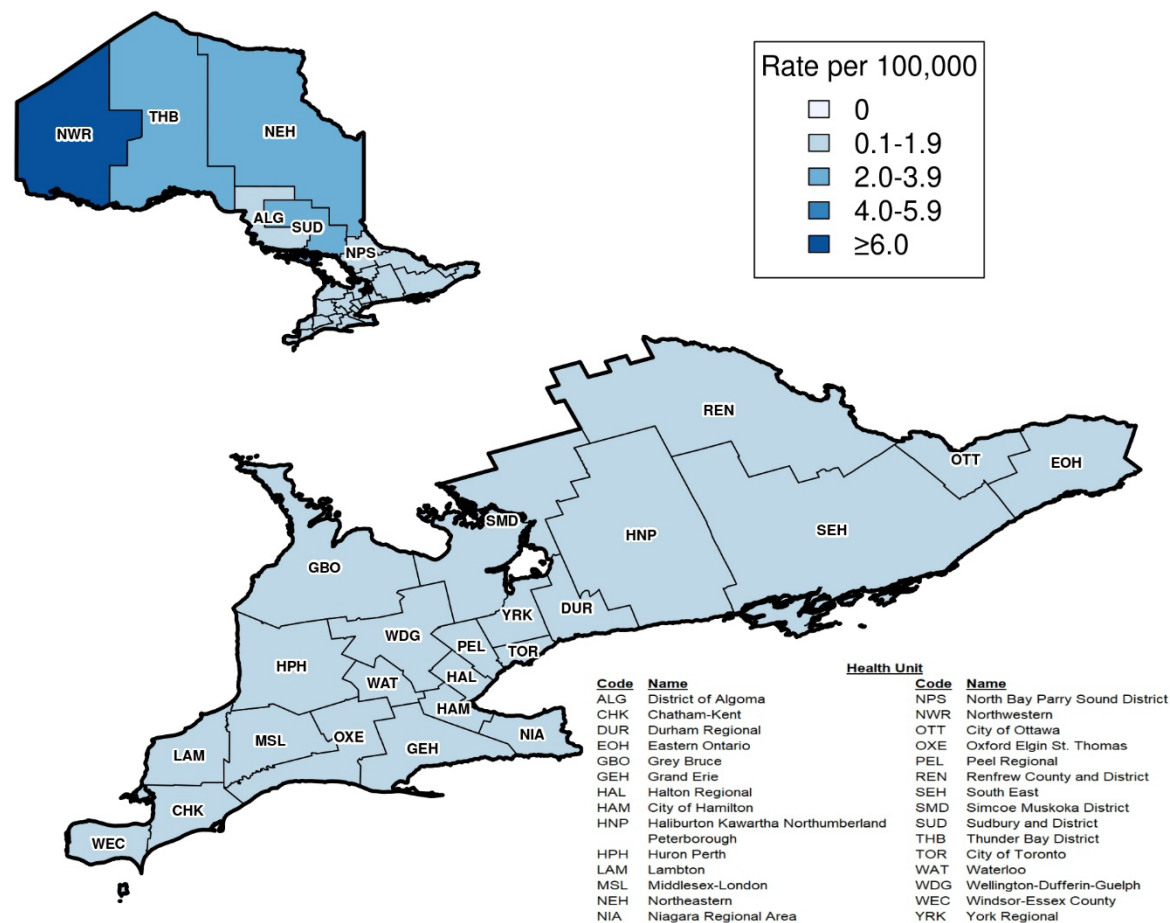

*To ensure comparability with the current season, only confirmed iGAS case data reported during the same period in each post-pandemic season are included.

Figure 3: Rate of Confirmed Cases of iGAS Reported in June 2026 by Public Health Unit in Ontario

Data source: iPHIS

Figure 4: Average Monthly Rate of Confirmed Cases of iGAS Reported in the Current Season (October 1, 2025 – June 30, 2026) by Public Health Unit in Ontario*

Data source: iPHIS

*The average monthly rate was determined by dividing the cumulative rate of confirmed iGAS cases for each PHU by the number of months included in the reporting period (i.e., for data captured until June 30, 2026, the cumulative rate was divided by nine months to determine the monthly rate for each PHU).

Severity

Table 2: Severe Outcomes for Confirmed iGAS Cases by Age Group and Season in Ontario: Current Season (October 1, 2025 – June 30, 2026) Compared to the Post-Pandemic Season Average (October 1, 2022 – June 30, 2025)*

Age Group (years)	Current season: Number (%) of cases hospitalized (October 1, 2025 – June 30, 2026)	Post-pandemic season: Average number (%) of cases hospitalized (October 1, 2022 – June 30, 2025)	Current season: Number (%) of cases with a fatal outcome (October 1, 2025 – June 30, 2026)	Post-pandemic season: Average number (%) of cases with a fatal outcome (October 1, 2022 – June 30, 2025)
< 1	3/5 (60.0%)	11.3/14.3 (79.0%)	1/5 (20.0%)	1.3/14.3 (9.1%)
1 – 4	14/22 (63.6%)	43/50.7 (84.8%)	3/22 (13.6%)	4.3/50.7 (8.5%)
5 – 9	20/27 (74.1%)	47.3/54 (87.6%)	2/27 (7.4%)	3.3/54 (6.1%)
10 – 13	8/9 (88.9%)	16.7/19.7 (84.8%)	2/9 (22.2%)	1.7/19.7 (8.6%)
14 – 17	11/12 (91.7%)	7.3/10 (73.0%)	0/12 (0.0%)	0.7/10 (7.0%)
18 – 64	588/725 (81.1%)	621.3/782 (79.5%)	53/725 (7.3%)	84/782 (10.7%)
≥65	370/439 (84.3%)	402.3/488.3 (82.4%)	57/439 (13.0%)	81.7/488.3 (16.7%)
Unknown	0/0 (0.0%)	0.3/1 (30.0%)	0/0 (0.0%)	0/1 (0.0%)
Total	1,014/1,239 (81.8%)	1,149.5/1,420 (81%)	118/1,239 (9.5%)	177/1,420 (12.5%)

Data source: iPHIS

*To ensure comparability with the current season, only confirmed iGAS case data reported during the same period in each post-pandemic season are included.

Table 3: Number (%) of Most Commonly Reported *Emm* Types among Confirmed iGAS Cases in Ontario by Age Group*: Current Season (October 1, 2025 – June 30, 2026) Compared to the Post-Pandemic Season Average (October 1, 2022 – June 30, 2025)**

Most commonly reported <i>emm</i> type by rank	Current season: ≥18 years of age (October 1, 2025 – June 30, 2026)	Post-pandemic season: ≥18 years of age average (October 1, 2022– June 30, 2025)	Current season: <18 years of age (October 1, 2025 – June 30, 2026)	Post-pandemic season: <18 years of age average (October 1, 2022– June 30, 2025)
<i>emm</i> 5	137 (15.9%)	18 (1.7%)	1 (2.3%)	0.7 (0.6%)
<i>emm</i> 59	101 (11.7%)	45.7 (4.4%)	2 (4.7%)	1 (0.8%)
<i>emm</i> 41	61 (7.1%)	53 (5.1%)	0 (0.0%)	0.7 (0.6%)
<i>emm</i> 83	56 (6.5%)	29.7 (2.9%)	0 (0%)	0.3 (0.2%)
<i>emm</i> 44	54 (6.3%)	1.3 (0.1%)	1 (2.3%)	0 (0.0%)
<i>emm</i> 74	54 (6.3%)	61.3 (5.9%)	0 (0.0%)	0.7 (0.6%)
<i>emm</i> 49	51 (5.9%)	88 (8.5%)	0 (0.0%)	2 (1.7%)
<i>emm</i> 3	41 (4.8%)	33.7 (3.3%)	10 (23.3%)	8.3 (6.9%)
<i>emm</i> 28	34 (3.9%)	31.3 (3%)	1 (2.3%)	2 (1.7%)
<i>emm</i> 92	29 (3.4%)	51 (4.9%)	1 (2.3%)	1 (0.8%)
<i>emm</i> 4	25 (2.9%)	23 (2.2%)	15 (34.9%)	8.7 (7.2%)
<i>emm</i> 1	24 (2.8%)	213.3 (20.7%)	3 (7.0%)	63 (52.3%)
Other	194 (22.5%)	382.3 (37.1%)	9 (20.9%)	32.1 (26.6%)
Total with <i>emm</i> type	861 (74.0%)	1031.6 (81.2%)	43 (57.3%)	120.5 (81.1%)
Total without <i>emm</i> type	303 (26.0%)	238.7 (18.8%)	32 (42.7%)	28 (18.9%)
Total	1,164 (100.0%)	1,270.3 (100.0%)	75 (100.0%)	148.5 (100.0%)

Data source: iPHIS

* Cases with an unknown age are excluded from this table.

**To ensure comparability with the current season, only confirmed iGAS case data reported during the same period in each post-pandemic season are included.

Technical Notes

- The data for this report were based on information entered in iPHIS as of:
 - **July 13, 2026 at 9 a.m.** for cases reported October 1, 2024 onwards
 - **November 10, 2025 at 9 a.m.** for cases reported during the five pre-pandemic seasons (October 1, 2014 to September 30, 2019) and the 2022-23 (October 1, 2022 to September 30, 2023) and 2023-24 (October 1, 2023 to September 30, 2024) seasons.
- iPHIS is a dynamic disease reporting system that allows ongoing updates to previously entered data. As a result, data extracted from iPHIS represent a snapshot at the time of extraction and may differ from previous or subsequent reports.
- These data only represent laboratory-confirmed cases of iGAS reported to public health and recorded in iPHIS. As a result, all case counts are subject to varying degrees of underreporting due to a variety of factors, such as disease awareness and medical care seeking behaviours that may depend on severity of illness, clinical practices, and changes in laboratory testing and reporting behaviours.
- Population estimates used to calculate rates for total cases were calculated using the Ontario 2025 and 2026 population projections³, sourced from the Ontario Ministry of Finance, and Ontario 2015 to 2024 population estimates, sourced from Statistics Canada.⁴
- Only iGAS cases meeting the confirmed case classification as listed in the Ontario Ministry of Health (MOH) surveillance case definitions are included in the reported case counts.¹
 - Provincial surveillance case definitions available online under the Infectious Diseases Protocol are the most current.
 - Changes to provincial surveillance case definitions and disease classifications have occurred over the years and thus may impact the analysis of trends over time. Cases are classified in iPHIS based on the Ontario MOH surveillance case definitions in use at the time the case was identified.
- Cases are reported based on the Episode Date, which is an estimate of the onset date of disease for a case. In order to determine this date, the following hierarchy exists in iPHIS: Onset Date > Specimen Collection Date > Lab Test Date > Reported Date.
 - For example: If an Onset Date exists, it will be used as the Episode Date. If Onset Date is not available, then the next available date in the hierarchy (i.e., Specimen Collection Date) will be used, and so on.
- Hospitalized iGAS cases were determined based on a reported intervention type description of “Hospitalization” or “ICU” (Intensive Care Unit) and a reported intervention start date on or after the case’s episode date.
- Fatal iGAS cases were determined based on a case outcome description of “Fatal” and the type of death not being reported as “Reportable disease was unrelated to cause of death.”
- Cases for which the Diagnosing Health Unit (DHU) was reported as Ontario Ministry of Health and Long-Term Care (MOHLTC) (to signify a case that is not a resident of Ontario) or MUSKOKA-PARRY SOUND (a public health unit that no longer exists) were excluded from this analysis.
