Introduction

Governments and other institutional public health reports document important key milestones in the field, and offer a wealth of information to help researchers and policy makers build on the lessons of the past. Despite being influential public health documents, these reports have not previously been systematically collected and disseminated. In the Digital Age they are periodically removed from organizational websites and not always readily retrievable.

This bibliography is curated by Public Health Ontario Library Services to ensure persistent access to seminal grey literature reports that have shaped Ontario's public health system. The included items are based on archival records and public accessibility. Researchers, students and librarians will find it convenient to have easy access to these items for their studies or for inclusion in library collections.

Public Health Ontario Library Services is committed to maintaining and updating this collection, to ensure the long-term accessibility of this important grey literature.

Suggestions for inclusion may be submitted to library@oahpp.ca.
