Public Health Agencies

Public Health Agency of Canada | canada.ca
Instead of daily case counts and vaccinations, starting the week of December 6, 2021 we will be reporting weekly trends. For daily case counts, you can still check 2019 novel coronavirus: outbreak update, or COVID-19 vaccination in Canada for vaccination rates.

- **Key COVID updates** [11-28-2022]
  - Weekly change in cases: 15,085
  - Total cases: 4,408,276
  - Weekly change in deaths: 267
  - Total deaths: 47,781
- **COVIDTrends** [updated 11-28-2022]
  - Announcement: COVIDTrends ends on December 2, 2022
- **COVID-19 daily epidemiology update** [updated regularly]
- **COVID-19 data trends** [updated regularly]

BC Centre for Disease Control | bccdc.ca

- **Clinical practice guide: recommendations and evidence** [updated 11-28-2022]

Institut national de santé publique | inspq.qc.ca

- **Influence de la température et de l’humidité sur la transmission potentielle de la COVID-19** [12-01-2022]
- **SRAS-CoV-2 : gestion des travailleurs de la santé en milieux de soins** [updated 11-29-2022]

CDC: Centers for Disease Control and Prevention | cdc.gov

- **COVID Data Tracker recent updates** - 2022-12-01 - the County View page was updated to display "Updated (Bivalent) Booster Dose" data for all age groups at the county level and the "People with a First Booster Dose" and "People with a Second Booster Dose" metric options were removed from the page. [12-02-2022]
- **COVID-19 disruptions in HIV testing and prevention highlight need for innovation and investment before the next public health emergency** [12-01-2022]
- **SARS-CoV-2 serology and self-reported infection among adults — National Health and Nutrition Examination Survey, United States, August 2021–May 2022** [12-01-2022]
- **HIV services and outcomes during the COVID-19 pandemic — United States, 2019–2021** [12-01-2022]
- **Effectiveness of bivalent mRNA vaccines in preventing symptomatic SARS-CoV-2 infection — increasing community access to testing program, United States, September–November 2022** [12-01-2022]
- **Cases in the U.S.** [11-30-2022]
- **Overall US COVID-19 vaccine distribution and administration update as of Wed, 30 Nov 2022 06:00:00 EST** [11-30-2022]
- **Archive of COVID-19 vaccination data updates** [11-28-2022]
“At the end of week 47, 2022 (week ending 27 November), the pooled EU/EEA COVID-19 case rate in people aged 65 years and older continued to decrease, while the overall (all ages) COVID-19 case rate started to increase, up 5% compared to the previous week. Seven of the 28 countries with available data reported increases compared with the previous week in at least one of these indicators of transmission. These increases were recent (of 1–2 weeks duration), starting from relatively low levels.

- Pooled hospital or ICU admissions/occupancy remained stable at the EU/EEA level. However, increases were reported by seven of the 21 countries with data on these indicators. Increases were recent (of 1–3 weeks duration) and reported values relatively low, ranging from 16–33% of the pandemic maximum in these countries. None of the 26 countries with available data reported increases in weekly COVID-19 deaths. The pooled EU/EEA COVID-19 death rate fell by 21% compared to the previous week, with 1 386 deaths reported.

- Forecasts of cases, hospital admissions and deaths from the European COVID-19 Forecast Hub provide predictions for weeks 48 and 49. Compared with the previous week, increasing trends in cases, increasing trends in hospital admissions, and stable trends in deaths are forecast for the EU/EEA overall by the end of week 49. Increases in cases are forecast for nine countries, and in deaths for four countries.

- BQ.1 has become the dominant variant in seven EU/EEA countries but high prevalence of BQ.1 does not appear to be associated with a deterioration of the epidemiological situation. Some of the countries in which BQ.1 is dominant are among those showing recent increases in transmission and/or severity indicators, but the countries with the highest reported proportions of BQ.1 have not reported any concerning epidemiological changes to date.

- Among the nine countries with an adequate volume of sequencing or genotyping for weeks 45–46 (7 November to 20 November 2022), the estimated distribution of variants of concern (VOC) or of interest (VOI) was 52.7% (38.6–97.5% from nine countries) for BA.5, 37.0% (8.5–53.9% from seven countries) for BQ.1, 4.3% (0.7–25.9% from nine countries) for BA.2.75, 1.4% (0.3–3.7% from nine countries) for BA.2, and 1.3% (0.5–5.1% from nine countries) for BA.2.”
