Public Health Agencies

Public Health Agency of Canada | canada.ca
Instead of daily case counts and vaccinations, starting the week of December 6, 2021 we will be reporting weekly trends. For daily case counts, you can still check 2019 novel coronavirus: outbreak update, or COVID-19 vaccination in Canada for vaccination rates.

- Government of Canada supports the Canadian Association of Midwives in communicating the importance of staying up to date with COVID-19 vaccination [11-15-2022]
- Key COVID updates [11-15-2022]
  - Weekly change in cases: 18,820
  - Total cases: 4,377,070
  - Weekly change in deaths: 309
  - Total deaths: 47,118
- COVID-19 daily epidemiology update [updated regularly]
- COVID-19 data trends [updated regularly]

BC Centre for Disease Control | bccdc.ca

- Immunization manual: summary of changes: admin circular [updated 11-17-2022]
- Interim guidance: public health management of COVID-19 in the community [updated 11-17-2022]

Institut national de santé publique | inspq.qc.ca

CDC: Centers for Disease Control and Prevention | cdc.gov

- COVID Data Tracker weekly review [11-18-2022]
  - Update on COVID-19–Related Deaths
    - Hospitalizations and deaths from COVID-19 have substantially decreased in the United States in recent months. This is likely due to high levels of population immunity, either through vaccination or prior infection, as well as improvements in early treatment for patients at risk for severe disease.
mortality among adults in the United States. Currently, the virus poses the highest risk of COVID-19–related death for older adults (especially those older than age 85 years), people who have underlying medical conditions, people with disabilities, and people who are not up to date with COVID-19 vaccinations.

- **COVID Data Tracker recent updates - 2022-11-17** - a new figure displaying the "Percent of Pregnant People Ages 18-49 Years Who Received an Updated (Bivalent) Booster Dose Before or During Pregnancy Overall, by Race/Ethnicity, and Week Ending Date" was added to the Vaccination Among Pregnant People tab. [11-18-2022]
- **COVID Data Tracker recent updates - 2022-11-17** - the Vaccination Trends tab was updated to display a new metric that displays a daily count of people receiving an updated (bivalent) booster dose by date of vaccine administration. [11-18-2022]
- **COVID Data Tracker recent updates - 2022-11-17** - the Vaccine Confidence tab was updated to include new national survey indicators on bivalent booster uptake and intent to receive bivalent booster among children and teens ages 5-17 years. [11-18-2022]
- **Archive of COVID-19 vaccination data updates** [11-18-2022]
- **Sociodemographic variation in early uptake of COVID-19 vaccine and parental intent and attitudes toward vaccination of children aged 6 months–4 years — United States, July 1–29, 2022** [11-17-2022]
- **Previous COVID-19 forecasts: deaths - 2022** [11-17-2022]
- **COVID-19 forecasts: deaths** [11-17-2022]
- **Cases in the U.S.** [11-16-2022]
- **Overall US COVID-19 vaccine distribution and administration update as of Wed, 16 Nov 2022 06:00:00 EST** [11-16-2022]
- **Archive of COVID-19 vaccination data updates** [updated 11-14-2022]
- **CDC COVID-19 tests** [updated 11-14-2022]
- **Selected adverse events reported after COVID-19 vaccination** [updated 11-14-2022]
- **CDC’s influenza SARS-CoV-2 multiplex assay** [updated 11-14-2022]

**ECDC: European Centre for Disease Prevention and Control | ecdc.europa.eu**

- **Communicable disease threats report, 13-19 November 2022, week 46** [11-18-2022]
  - “At the end of week 45, 2022 (week ending 13 November), decreasing trends continue to be observed in EU/EEA-level COVID-19 case rates, including in people aged 65 years and older, and death rates. Hospital and ICU indicators have either remained stable or decreased across the region in comparison to the previous week. Uptake of the second booster dose continues to be relatively low in most countries, and target groups. It remains important to continue monitoring the epidemiological situation, especially considering the increasing proportion of the BQ.1 variant of interest.
  - The pooled EU/EEA notification rate of COVID-19 cases among people aged 65 years and older decreased by 23% compared to the previous week, with only one of the 23 countries reporting data on this indicator seeing increases over the past two weeks.
Overall notification rates (all-age) decreased by 21%, albeit one of the 30 reporting countries reporting a recent increase.

- Pooled EU/EEA hospital and ICU indicators have either remained stable (hospital occupancy and ICU admission) or decreased (hospital admission and ICU occupancy) in comparison to the previous week. However, three of 24 countries reported an increasing trend in one of these indicators within the previous week. A decreasing trend continues to be observed for pooled EU/EEA COVID-19 death rate, for the previous two weeks, which remains low at 7% of the pandemic maximum.

- Forecasts of cases, hospital admissions and deaths from the European COVID-19 Forecast Hub provide predictions for weeks 46 and 47. Compared with the previous week, stable trends in cases, and decreasing trends in deaths are forecast for the EU/EEA overall by the end of week 47. Forecasts for individual countries may differ from those for the EU/EEA as a whole. It should be noted that forecasts of cases are considered to be increasingly unreliable due to changes in testing criteria and reporting procedures. All current forecasts, in particular case forecasts, should be treated with caution.

- The cumulative uptake of a first booster was 65.5% (country range: 11.2–86.8%) among adults aged 18 years and older, 84.5% (country range: 13.3–100.0%) among individuals aged 60 years and older and 54.5% (country range: 9.2–75.6%) in the total population. The cumulative uptake of a second booster was 13.5% (country range: 0.1–40.3%) among adults aged 18 years and older, 28.6% (country range: 0.3–81.9%) among individuals aged 60 years and older and 11.0% (country range: 0.1–32.3%) in the total population.

- Among the 10 countries with an adequate volume of sequencing or genotyping for weeks 43–44 (24 October to 6 November 2022), the estimated distribution of variants of concern (VOC) or of interest (VOI) was 70.3% (49.3–98.2% from 10 countries) for BA.5, 23.3% (9.9–42.7% from 7 countries) for BQ.1, 3.0% (0.6–15.1% from 9 countries) for BA.2.75, 2.2% (0.4–4.5% from 10 countries) for BA.4 and 0.6% (0.2–3.9%, 227 detections from 9 countries) for BA.2.
