Public Health Agencies

Public Health Agency of Canada | canada.ca
Instead of daily case counts and vaccinations, starting the week of December 6, 2021 we will be reporting weekly trends. For daily case counts, you can still check 2019 novel coronavirus: outbreak update, or COVID-19 vaccination in Canada for vaccination rates.

- **Key COVID updates [10-14-2022]**
  - Weekly change in cases: 20,002
  - Total cases: 4,293,273
  - Weekly change in deaths: 226
  - Total deaths: 45,689
  - Total tests performed: 65,412,557
  - Daily percent positive (last 7 days): 12.9%
  - Daily tests per 100,000 population (last 7 days): 57
- [COVID-19: summary data about travellers, testing and compliance](updated 10-06-2022)
- [Mathematical modelling and COVID-19](updated regularly)
- [COVID-19 daily epidemiology update](updated regularly)
- [COVID-19 data trends](updated regularly)

CDC: Centers for Disease Control and Prevention | cdc.gov
- Stay up to date with your vaccines [10-14-2022]
- COVID Data Tracker weekly review [10-14-2022]
  - “As of October 13, 2022, there are 67 (2.1%) counties, districts, or territories with a high COVID-19 Community Level, 583 (18.1%) counties with a medium Community Level, and 2,567 (79.7%) counties with a low Community Level. Compared with last week, this represents a minor decrease (~0.8 percentage points) in the number of high-level counties, a moderate decrease (~2.2 percentage points) in the number of medium-level counties, and a moderate increase (~3.0 percentage points) in the number of low-level counties. Overall, 45 out of 52 jurisdictions** had high- or medium-level counties this week. Arizona, the District of Columbia, Hawaii, Nevada, New Mexico, South Carolina, and Utah are the only jurisdictions to have all counties at low Community Levels.”

ECDC: European Centre for Disease Prevention and Control | ecdc.europa.eu
• Communicable disease threats report, 9-15 October 2022, week 41 [10-14-2022]
• Country overview report: week 40 2022 [10-13-2022]
  • “At the end of week 40, 2022 (week ending 9 October), widespread increases were being observed in all indicators, with one third of EU/EEA countries reporting increases in COVID-19 deaths. Forecasts suggest that these trends will continue over the coming two weeks. Increased COVID-19 transmission and mortality have also been observed among residents of long-term care facilities. No significant changes in the variant distribution have been reported. The vaccination uptake for the second booster dose remains at suboptimal levels in the target groups in many EU/EEA countries.
  • Increasing trends in cases are forecast by the European COVID-19 Forecast Hub in 17 countries, and in deaths in nine countries in the two weeks to week 42. These translate to forecast increases in the pooled rate of cases and deaths at the EU/EEA level in this period.
  • The pooled EU/EEA notification rate of COVID-19 cases among people aged 65 years and older increased by 33% compared with the previous week, as part of a three-week increasing trend. Increases of 1–6 weeks’ duration were observed in 16 of the 25 countries reporting data on this indicator. Increases in overall (all-age) notification rates were reported by 13 countries.
  • Pooled EU/EEA rates of hospital occupancy, ICU occupancy and ICU admissions for COVID-19 have been increasing for the last 2–3 weeks. Of 26 countries reporting data, 14 observed increasing trends of 1–5 weeks’ duration in at least one hospital or ICU indicator. The pooled EU/EEA COVID-19 death rate remained at a low level, similar to the previous week, but increasing trends of 1–4 weeks’ duration were observed in 11 countries.
  • The cumulative uptake of a first booster was 65.0% (country range: 11.2–86.6%) among adults aged 18 years and older, 84.2% (country range: 13.3–100.0%) among individuals aged 60 years and older and 53.9% (country range: 9.2–72.9%) in the total population. The cumulative uptake of a second booster was 8.7% (country range: 0.1–26.5%) among adults aged 18 years and older, 17.8% (country range: 0.3–68.0%) among individuals aged 60 years and older and 7.1% (country range: 0.1–20.9%) in the total population.
  • Among the 10 countries with an adequate volume of sequencing or genotyping for weeks 38–39 (19 September to 2 October 2022), the estimated distribution of variants of concern (VOC) or of interest (VOI) was 98.8% (97.1–100.0% from 10 countries) for BA.4/BA.5, 0.9% (0.1–1.8%, 172 detections from seven countries) for BA.2.75, and 0.7% (0.3–1.7%, 801 detections from eight countries) for BA.2.”
