Public Health Agencies

Public Health Agency of Canada | canada.ca
Instead of daily case counts and vaccinations, starting the week of December 6, 2021 we will be reporting weekly trends. For daily case counts, you can still check 2019 novel coronavirus: outbreak update, or COVID-19 vaccination in Canada for vaccination rates.

- Government of Canada will remove pre-entry test requirement for fully vaccinated travellers on April 1 [03-17-2022]
- Canada COVID-19 weekly epidemiology report: 27 February to 05 March 2022 (week 09) [03-11-2022]
- Vaccine coverage: This report was last updated on March 11, 2022 with data up to and including March 6, 2022.
  - 89.01% of the population 5 years and older are fully vaccinated
- Statement from the Minister of Health on Canada’s second National Day of Observance for COVID-19 [03-11-2022]
- Statement from the Chief Public Health Officer of Canada [03-11-2022]
- Mathematical modelling and COVID-19 [updated regularly]
- COVID-19 daily epidemiology update [updated regularly]

International (outside of Canada)

CDC: Centers for Disease Control and Prevention | cdc.gov
- COVID Data Tracker weekly review [03-18-2022]
“COVID-19 cases, hospitalizations, and deaths all continue to decrease in the United States. According to CDC’s COVID Data Tracker, as of March 16, 2022, 76.7% of the total U.S. population has received at least one dose of a COVID-19 vaccine, and 65.3% has completed their primary series. However, only about half of the booster-eligible population has received a booster dose and is considered up to date on their COVID-19 vaccines. Two new studies show the effectiveness of COVID-19 vaccines and boosters across periods of three variants of concern (Alpha, Delta, and Omicron). CDC released a study today showing that, among adults hospitalized with COVID-19 during the Delta and Omicron waves, those who received two or three doses of the Pfizer-BioNTech or Moderna vaccine had 90–95% less risk of dying or needing a ventilator compared with adults who were not vaccinated. Protection was highest in adults who received a third COVID-19 vaccine dose.”

- Cases in the U.S. [03-17-2022]
- Overall US COVID-19 vaccine distribution and administration update as of Thu, 17 Mar 2022 06:00:00 EST [03-17-2022]
- The Advisory Committee on Immunization Practices’ recommendation for use of Moderna COVID-19 vaccine in adults aged ≥18 years and considerations for extended intervals for administration of primary series doses of mRNA COVID-19 vaccines — United States, February 2022 [03-17-2022]
- Hospitalization of infants and children aged 0–4 years with laboratory-confirmed COVID-19 — COVID-NET, 14 states, March 2020–February 2022 [03-17-2022]
- Effectiveness of 2-dose BNT162b2 (Pfizer BioNTech) mRNA vaccine in preventing SARS-CoV-2 infection among children aged 5–11 years and adolescents aged 12–15 years — PROTECT Cohort, July 2021–February 2022 [03-17-2022]

**ECDC: European Centre for Disease Prevention and Control | ecdc.europa.eu**
- COVID-19 testing, vaccination and implementation of protective measures recommended for reception centres of displaced people from Ukraine [03-18-2022]
- Guidance for the prevention and control of COVID-19 in temporary reception centres in the context of the large numbers of people fleeing Ukraine [03-18-2022]
At the end of week 10 2022 (week ending Sunday, 13 March), As of 13 March 2022, the epidemiological situation in the EU/EEA was characterised by a break in the sustained decreasing trend in case rates that had been observed in previous weeks, with an overall 14-day case notification rate that increased by 4.6% and a proportionally higher 9.1% increase among people aged 65 years and above. This is despite reductions in the availability of testing in some countries. Among 14 countries with increasing overall case rates compared to last week, 13 also saw increases among people aged 65 years and above, with record-high rates for this age group reported by six countries.

This increased transmission, particularly among the elderly, is resulting in worsening indicators of severity. Increases in hospital indicators were reported by six countries, including two with their highest ever levels of hospital occupancy due to COVID-19. Five countries reported increases in death rates, of which three reached their highest levels to date. At times of such high incidence, some people are likely to be hospitalised or die with, not due to, COVID-19. ICU admission and occupancy, which may give a more reliable indication of severity, remain at relatively lower levels, ranging from 2.7% to 50% of the peak pandemic levels observed in the 24 countries that report these data.

The overall COVID-19 case notification rate for the EU/EEA was 1 565 per 100 000 population (1 496 the previous week). This rate has been increasing for one week. The 14-day COVID-19 death rate (32.1 deaths per million population, compared with 41.8 deaths the previous week) has been decreasing for three weeks. Of 28 countries with data on hospital or ICU admissions or occupancy up to week 10, nine reported an increasing trend in at least one of these indicators compared with the previous week.

Forecasts of cases, hospital admissions and deaths from the European COVID-19 Forecast Hub provide predictions for weeks 11 and 12. Compared with the current week, increasing trends in cases, stable trends in hospital admissions, and stable trends in deaths are forecast overall for the EU/EEA by the end of week 12. Forecasts for individual countries may differ from those for the EU/EEA as a whole.

By the end of week 10, the cumulative uptake of the primary course of COVID-19 vaccination in the EU/EEA was 83.1% (country range: 35.1–94.6%) among adults aged 18 years and older and 72.2% (country range: 29.4–85.9%) in the total population. The cumulative uptake of a booster/additional dose was 62.9% (country range: 10.7–87.9%) among adults aged 18 years and older and 52.1% (country range: 8.7–70.2%) in the total population.

World Health Organization | who.int

- WHO Director-General’s opening remarks at the Member State Information Session on COVID-19 [03-17-2022]
  - “After several weeks of declines, reported cases of COVID-19 are once again increasing globally, especially in parts of Asia. These increases are occurring despite reductions in testing in some countries, which means the cases we are seeing are just the tip of the iceberg. We are also seeing unacceptably high levels of mortality in many countries, especially where vaccination levels are low among susceptible populations. The pandemic is not over, and it will not simply go away. Even as other crises demand our attention, we urge all Member States to remain focused on expanding vaccination to reach our shared target of vaccinating 70% of the population of every country by the middle of this year, with a focus on health workers, older people and other vulnerable groups.”
