Public Health Agencies

Public Health Agency of Canada | canada.ca

Instead of daily case counts and vaccinations, starting the week of December 6, 2021 we will be reporting weekly trends. For daily case counts, you can still check 2019 novel coronavirus: outbreak update, or COVID-19 vaccination in Canada for vaccination rates.

- **Vaccine coverage**: This report was last updated on February 18, 2022 with data up to and including February 13, 2022.
  - 89.31% of the population 18 years and older are fully vaccinated
  - 84.06% of the population 5 years and older are fully vaccinated

- **Canada COVID-19 weekly epidemiology report: 06 February TO 12 February 2022 (week 06)** [02-18-2022]
  - There was an average of 9,567 new cases reported daily during week 06, a decrease compared to the previous week. Following a decrease since late-September 2021, the number of daily reported cases have been increasing since early November 2021, with a rapid increase in cases in mid-December 2021, aligning with an increase in Omicron cases in Canada. The number of new reported cases should be interpreted with caution due to changes in testing policies across jurisdictions resulting in underestimation beginning in mid January 2022.
  - During week 06, the number of hospitalizations and ICU admissions decreased compared to the previous week. On 12 February 2022, there were 7,622 hospitalizations and 941 cases in ICU, representing a 14.6% decrease in the seven-day moving average of hospitalized cases, and a 12.1% decrease in ICU admissions, compared to one week prior.
  - Short-term forecasts predict slowing increase rate in cumulative cases (with large uncertainty due to testing and reporting) and a stable increase in cumulative deaths. According to forecasting, between 3,234,250 to 3,335,800 cumulative reported cases and 36,060 to 37,480 cumulative reported deaths are expected by 25 February 2022.
