Progress and Challenges in Implementing a Tuberculosis Genomic Epidemiology Program

Jennifer L. Guthrie, MSc, PhD
Assistant Professor, Western University
Dept of Microbiology & Immunology
Dept of Epidemiology & Biostatistics

Adjunct Scientist
Public Health Ontario

PHO Microbiology Rounds
November 17, 2022

Disclosures

I have no financial or other conflicts of interest

Learning Objectives

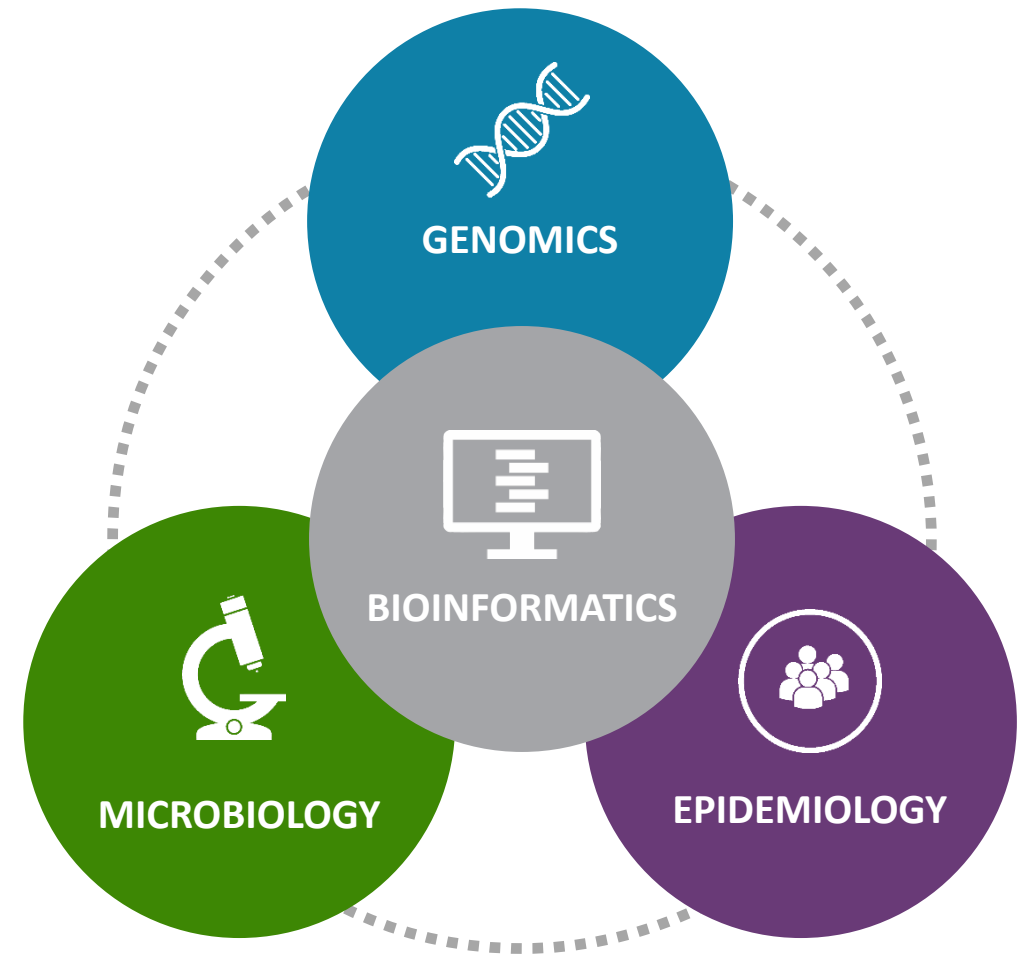

- Explain genomic epidemiology in plain language
- Describe how genomic epidemiology is applied to public health using a real-world example
- Discuss the challenges in implementing a tuberculosis genomic epidemiology program

epidemiology (noun, \ ,e-pə- ,dē-mē-'ä-lə-jē \

: the study and analysis of the distribution, patterns and determinants of health and disease conditions in a defined population

GENOMIC EPIDEMIOLOGY

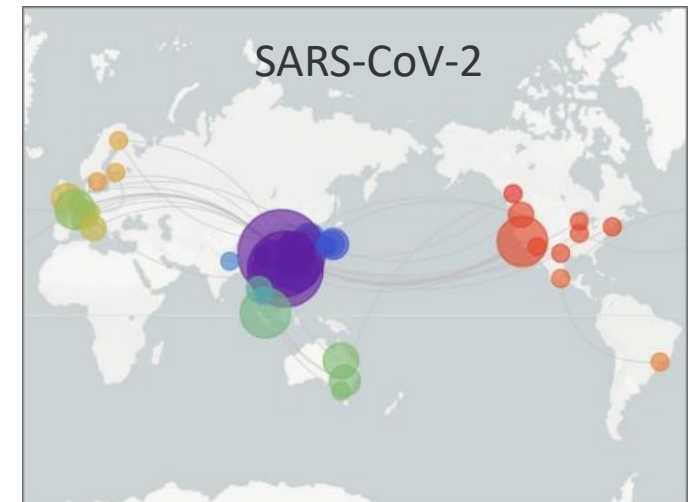

Use of **pathogen genomic data** to determine the distribution and spread of an infectious disease in a specified population and its application to public health decision making

GENOMIC EPIDEMIOLOGY

Applications

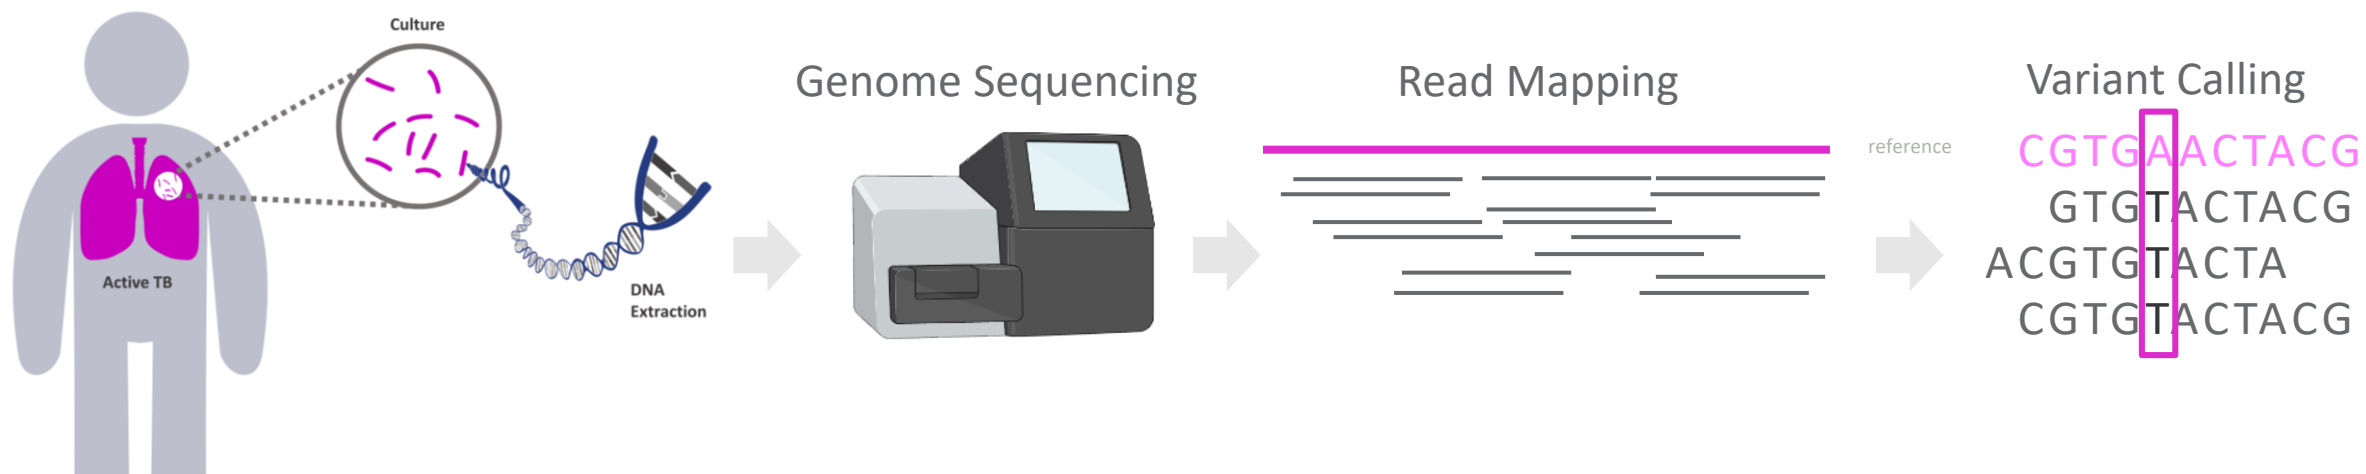

- **Population-level surveillance**
 - e.g., monitor variants to inform vaccine development
- **Outbreak detection**
 - e.g., link hospital cases with no known connections
- **Outbreak investigation**
 - e.g., identify source of food-borne outbreak
- **Infection control**
 - e.g., pinpoint contaminated hospital equipment
- **Track spread of a pathogen, locally to globally**
 - e.g., SARS-CoV-2

TUBERCULOSIS

Mycobacterium tuberculosis

- Respiratory infection
- Airborne transmission
- 5% – 10% develop active TB

mortality

1.6 million deaths annually

Canada

Low-incidence (4.7/100,000)

Yukon territory

Above the national rate
incidence (13.9/100,000)

TB GENOMIC EPIDEMIOLOGY

MOLECULAR METHODS

Genotyping

COMMON METHODS

Distinguishing Between *Mtb* Strains

POLLING QUESTION 1

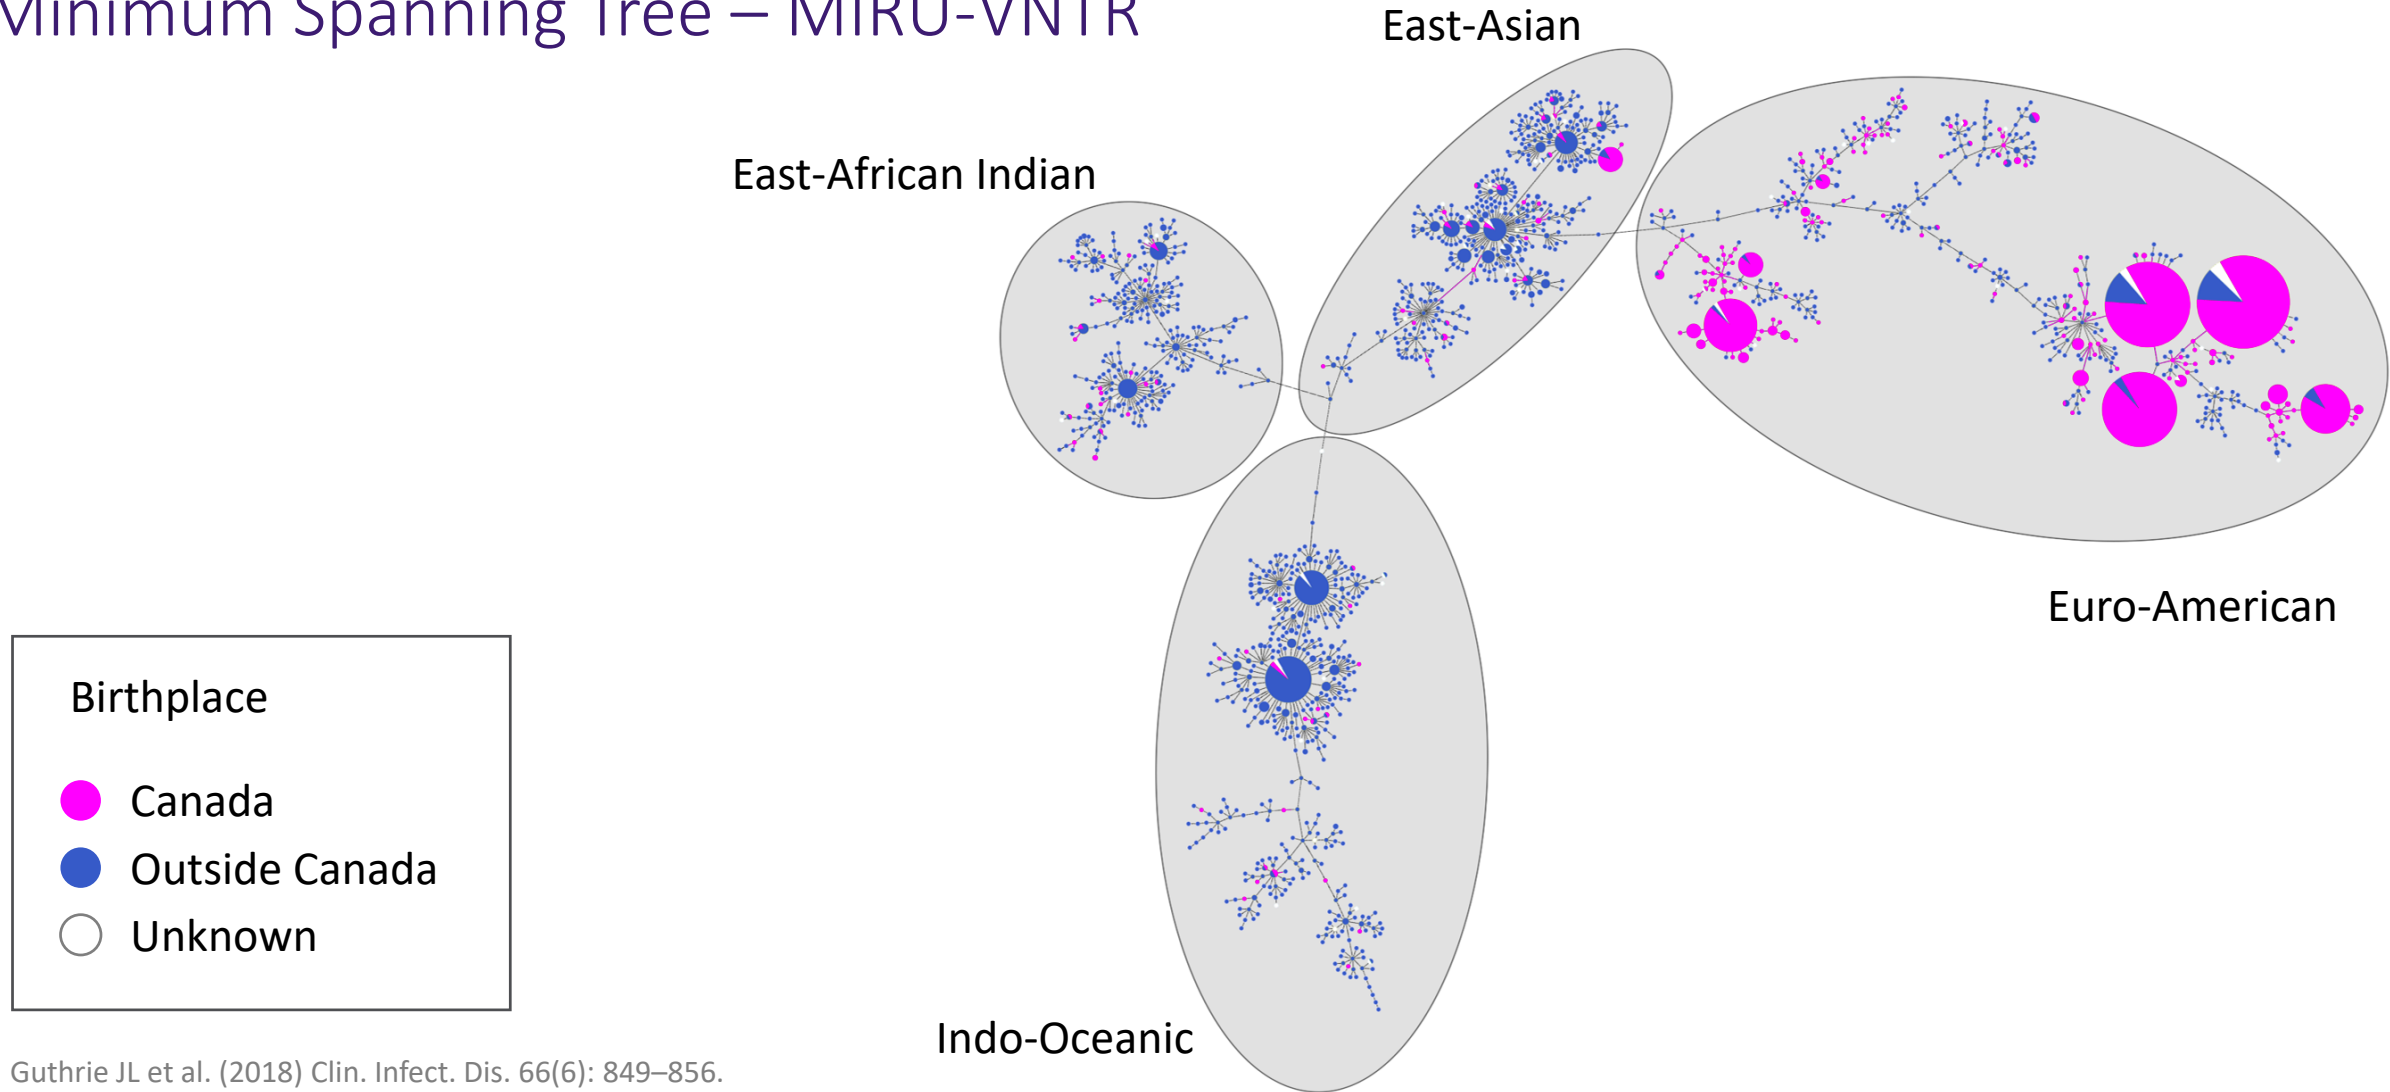

What proportion of the tuberculosis genome do genotyping methods use to differentiate between strains?

- A. <1%
- B. 1 - 25%
- C. 26 - 50%
- D. 51 -75%
- E. 76 - 100%

MOLECULAR EPIDEMIOLOGY of TB

Identify chains of transmission

Tuberculosis Transmission in a Remote Circumpolar Region

Area: 482,443 km²

Population: 38,400

It is easy to see genome sequencing as the hammer for every nail - Does it offer new information in a remote setting with very good epidemiological data?

PROJECT GOAL

Use small well-defined populations to examine molecular and genomic epidemiology and reconstruct transmission events

Resurrected **>2,300**
Mtb isolates from
frozen stocks

Extracted DNA
from each culture

Performed 24-locus
MIRU-VNTR
genotyping

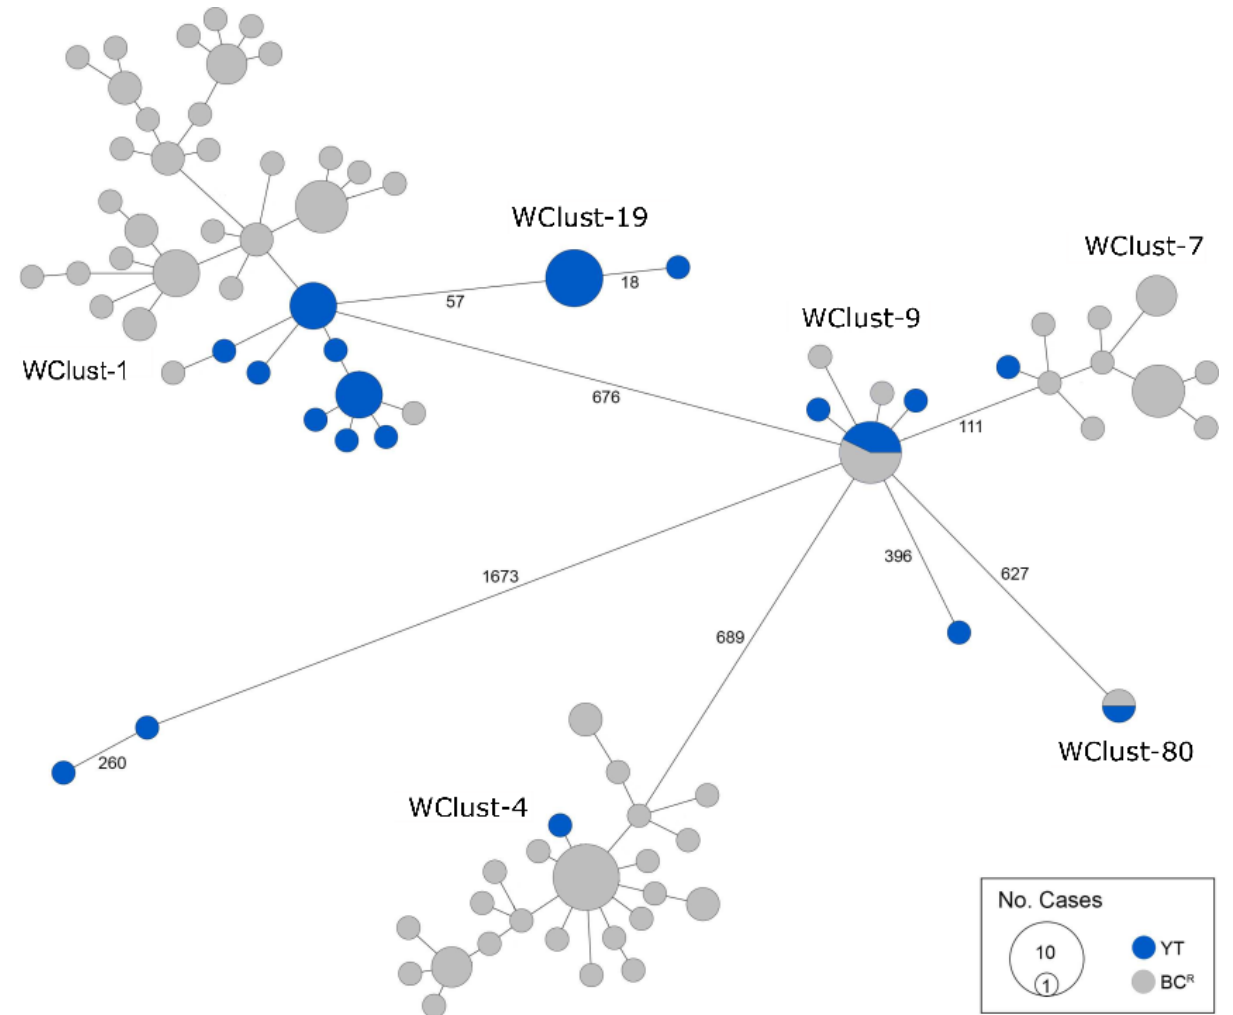

Sequencing of
>1,200 isolates and
bioinformatics
analyses

Predict transmission
networks and compare to
epi based transmission
networks

GENOMIC CLUSTERS

- Integrate genomic results of BC and YT
- Generate a minimum spanning tree to visualize genomic clusters

THREE GENOMICALLY DISTINCT CLUSTERS REPRESENTING TRANSMISSION

85% of reads **C**

82% OF WGS MATCHED EPIDEMIOLOGY IN LOCATION OF ACQUISITION

SOURCE CASE IDENTIFICATION MATCHING VARIED BY CLUSTER

Guthrie JL et al. (2020) Epidemiol. Infect. 148, E15.

PROGRAM ASSESSMENT

Assess the effectiveness of treatment and prevention programs

“To have had the WGS data, would have saved many hours of discussion – would have helped to focus the discussion by narrowing the list of potential sources”

“Many of these confirmed our suspicions”

“It was nice to know this was a reactivation and not a contact of a missed source”

ACCURACY
MIRU-VNTR conflicted with known epi connections, genomics more closely aligned and provided some new insights

GENOMIC EPIDEMIOLOGY PROGRAM

GENOMIC EPIDEMIOLOGY PROGRAM

GENOMIC EPIDEMIOLOGY PROGRAM

Challenges

WGS Data

- ❖ Standardized nomenclature and automated processes for data, including sample and file naming
- ❖ Genomics database that tracks samples and captures sequencing related data
- ❖ Sufficient physical storage capacity for large genome sequencing files
- ❖ Organized hierarchical file structure to efficiently store WGS files allowing for automated downstream processes

GENOMIC EPIDEMIOLOGY PROGRAM

Challenges

Epidemiological Data

- ❖ Collection and entry of data relevant to surveillance and outbreaks in standardized fields within CCM/iPHIS
- ❖ Routine and automated data extraction from CCM/iPHIS and linkage to WGS outputs

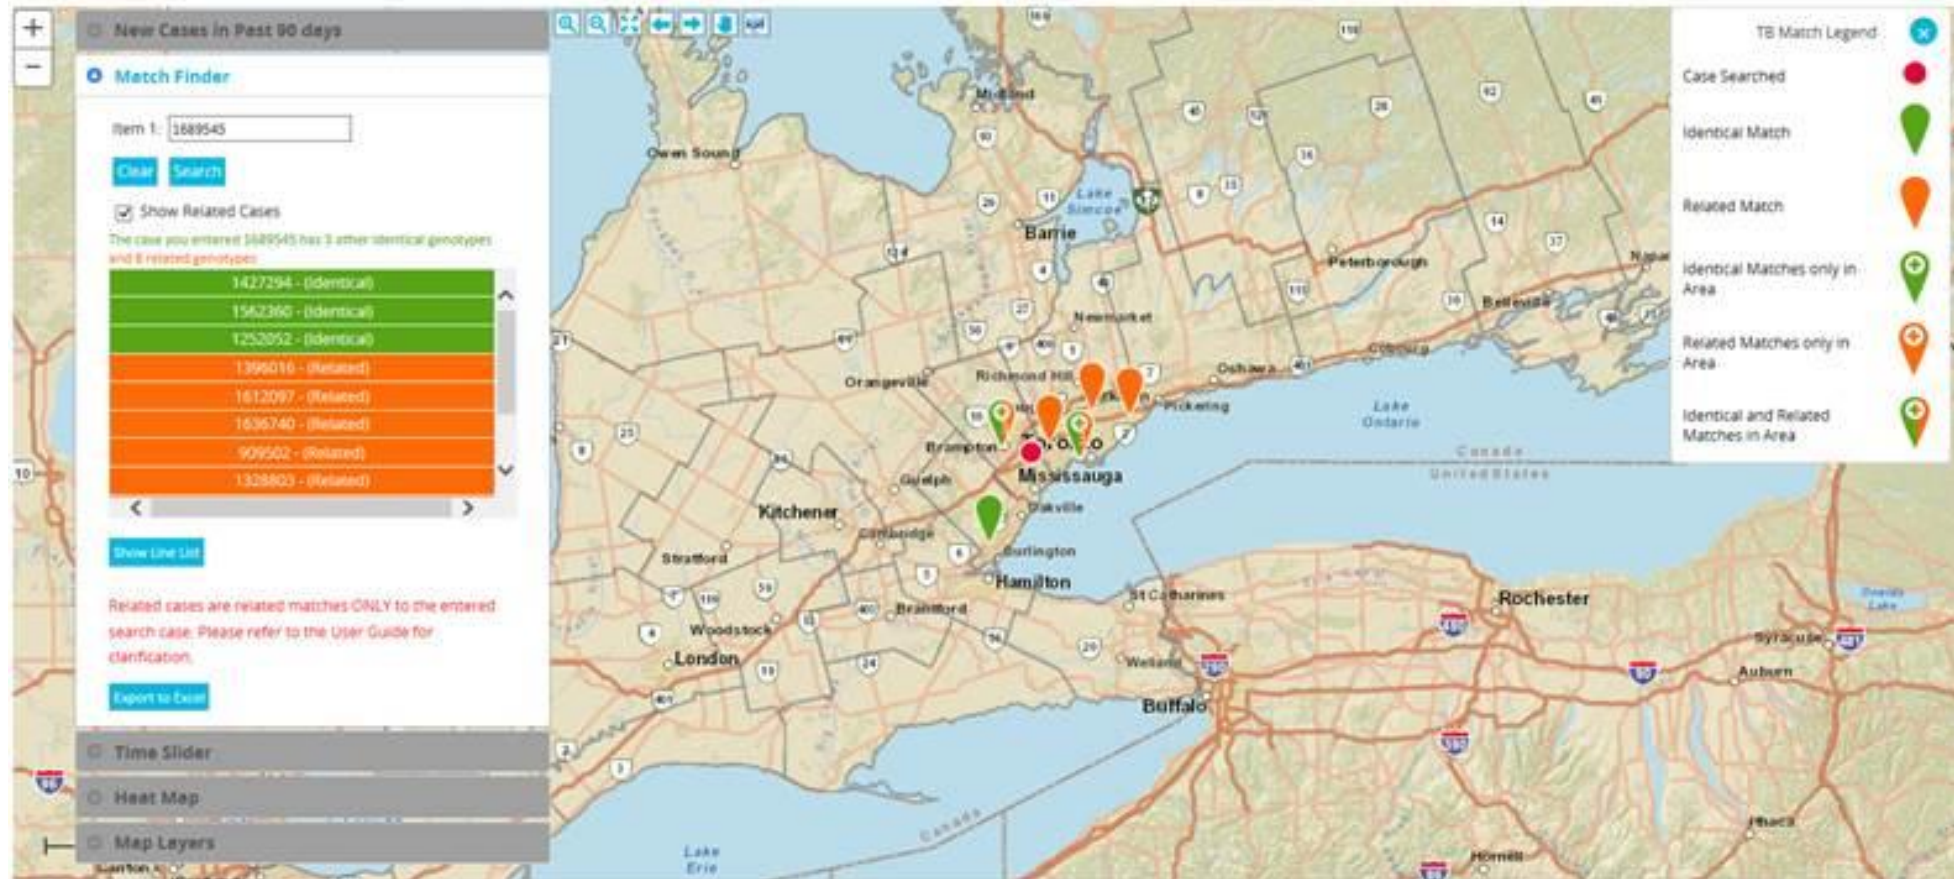

GENOMIC EPIDEMIOLOGY PROGRAM

Challenges

Data Analysis & Communication

- ❖ Personnel with a combination of epidemiological, bioinformatics, and evolutionary biology expertise and disease and pathogen specific knowledge
- ❖ Effective means to communicate TB genomic epidemiology to stakeholders
- ❖ Timeliness of alerts to possible transmission and outbreak investigations such that it is actionable

Cluster Summary Report

MIRU Cluster Id: AA123

Total Number of Cases: 44

Number of Health Regions: 5

Date of Last Diagnosis: 2022-05-25

POLLING QUESTION 2

Genomic epidemiology can resolve all tuberculosis outbreaks?

- A. True
- B. False

CONCLUSIONS

Genomics offers a **deeper understanding** of infectious disease epidemiology. Paired with active surveillance programs can resolve more outbreaks, suggest new modes of transmission, and reveal new reservoirs of disease

...however, implementation of a public health genomic epidemiology program remains challenging and **requires significant investments** in infrastructure and personnel with appropriate expertise.
