# Land Acknowledgement

- *Ontario is covered by 46 treaties and other agreements and is home to many Indigenous Nations from across Turtle Island, including the Inuit and the Métis. These treaties and other agreements, including the One Dish with One Spoon Wampum Belt Covenant, are agreements to peaceably share and care for the land and its resources. Other Indigenous Nations, Europeans and newcomers were invited into this covenant in the spirit of respect, peace and friendship.*
- *Most of us have come here as settlers, immigrants or newcomers in this generation or generations past.*

# Disclosure

---

- The presenters, Dr. Helen Chen, Natalie Riewe and Michael Whyte have no conflict of interests to disclose.

# Learning Objectives

---

1

1. Describe AI scribe technology including assessment of the potential benefits and limitations for public health practice.

2

2. Identify important considerations when reviewing and selecting AI scribe software for a local public health organization.

3

3. Describe how AI scribe can successfully be implemented into case and contact management workflows.

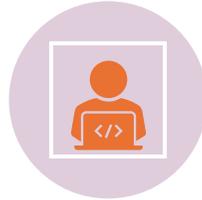

# What is an Ambient AI Scribe?

CONSENT-BASED  
CAPTURE OF  
CONVERSATION AUDIO  
TO CREATE  
STRUCTURED ENCOUNTER

JUDGMENT

# AI Scribe Technology Composition

---

# Context: Documentation Requirements in Public Health Disease Investigation

- Case/contact interviews generate extensive narrative documentation.
- Multiple systems/fields; structured + free-text
- Additional documentation needs after calls extends cycle times and can require after-hours work.
- Risk of backlogs during surges
- Timeliness and quality of reports has direct impact on downstream actions (e.g., contact management, lab testing, public communications, exclusions).
- Clear, consistent documentation supports program performance

# Pilot Overview (Multi-Site, Phased)

---

- Participants: infectious disease investigators (nurses and inspectors) and supervisors in public health programs.
  - Licenses limited to early adopters for iterative learning
- Scope: infectious disease case interviews and creation of case notes.
  - Use in routine and surge scenarios where feasible
- Phases: simulation → onboarding → live use.
  - Quality gate at each phase before scale-up
- •15 licenses between 2 public health agencies

# Evaluation Questions

---

How does AI scribe technology impact the time spent on administrative tasks by Infectious Disease (ID) investigators?

What are the perceived benefits and challenges of integrating AI scribe technology in local PHUs?

Does the use of AI scribe technology improve the accuracy and completeness of ID investigation records?

# Methods: Design & Instruments

---

## Staged testing and validation

Simulation tests

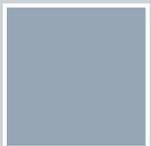

- different use environment and voice input
- Script to check accuracy of AI technology

## Live operational use

Time tracking for baseline and intervention periods

- Overall and by Disease of Public Health Significance
- Errors and omissions

## User Experience Evaluation

Surveys and semi-structured focus groups

- Thematic analysis of adoption, fit, and change management needs

# Privacy, Security and Trust

---

**Key considerations:**

Legal and privacy compliance (PHIPA, SCO2 Type II compliance, etc.)

Privacy Impact Assessment (PIA)

Client Consent

## Key takeaways:

- Privacy work took more time than expected
- Transparency with clients did not appear to reduce participation or trust
- Consent scripts and investigator comfort mattered as much as policy language

# Features and Workflow Fit

## Core feature categories

- Documentation quality
- Workflow compatibility
- Editability & transparency

## What the pilot showed

- Templates were *essential*; out-of-the-box formats did not meet DOPHS needs
- Process requirements are important to determine early

# Implementation and Sustainability

---

**True success lies within the organization;** we've identified 4 key principles integral to this success:

# Transcripts to Organized Note

Salmon. Narrative Documentation Salmon IPHIS Template Salmon. Symptoms & Risks **Transcript** Generate

reason for the call is just to discuss a stool sample result that we got back while one a little bit of history from you talk about kind of what it is and go from there did you have any questions about that plan okay so I understand you had a stool sample that was taken on January 20 and it showed the positive for salmonella were you aware of that I am my dr. called me to let me know okay so on the 20 did you see your dr. yes I saw my dr. on the 20th and then he gave me the kits to go get a sample and I was able to do it all on the same day perfect okay so just to get a bit of history from you but before we do that I want to talk a little bit about salmonella so do you know much about salmonella NO the dr. didn't give me much information about it but he said it was some type of bacteria yeah so it is it's caused by bacteria that's that is the salmonella bacteria and it can cause illness in humans and animals most easily spread people become ill from the food that they eat with the bacteria in it so some common foods can be things like salmonella raw meat their juices undercooked chicken beef or pork raw undercooked eggs my glasses are not working well today undercooked eggs or products drinking unpasteurized milk and untreated water so untreated surface drinking water that's been contaminated with stool and infected animals or person can also contain the bacteria even some animals can carry the bacteria without becoming sick themselves so when you handle pets or reptiles turtles frogs lizards snakes salamanders dogs cats baby chicks farm animals or their waste products you could

3:07 PM - 3:17 PM (10 mins)

## Untitled Encounter

Salmon. Narrative Documentation Salmon IPHIS Template Salmon. Symptoms & Risks Transcript **Generate**

- Treatment is determined by a doctor; the client's doctor advised no antibiotics were needed as they were feeling better.
- No medical conditions, allergies, medications, or previous infections were reported. The client is not immune-compromised.
- The client saw their doctor on 2026-01-20, who provided a kit for a stool sample, which was collected on the same day. No hospitalization or emergency room visits occurred. The client was not prescribed antibiotics as they were feeling better. No over-the-counter medications were taken.
- Symptoms started around 2026-01-13.  
Fever: Yes, from 2026-01-13 to 2026-01-15.  
Diarrhea: Yes, started 2026-01-13, ended 2026-01-22. No blood in diarrhea.  
Abdominal pain: Yes, started 2026-01-13, lasted until 2026-01-22.  
Nausea: No.  
Vomiting: No.  
Malaise/feeling unwell: Yes, started 2026-01-13.  
Fatigue: Yes, started 2026-01-13, likely ended around 2026-01-22.
- The client lives on a farm with cows, chickens, and goats. They suspect exposure to farm animals as a possible source of infection due to frequent contact and activities in the barn. The client practices good hand hygiene but acknowledges potential missed opportunities for contamination.
- No travel outside of the country or province was reported in the 7 days prior to symptom onset.

# Overall Use and Reach of the AI Scribe Pilot

[Image Source: Microsoft stock image]

---

44 interactions used AI scribe

---

20 interactions were baseline comparisons

---

10 of 15 investigators used AI scribe

# Documentation Quality and Accuracy

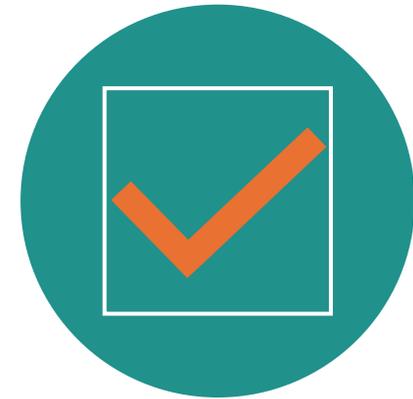

---

SIMULATION TESTING SHOWED ~80% AGREEMENT BETWEEN TRANSCRIPTS AND AI-GENERATED NOTES

AI SCRIBE MOSTLY FILTERED IRRELEVANT CONTENT

CUSTOM TEMPLATES IMPROVED ACCURACY AND RELEVANCE OF GENERATED NOTES

# Time Efficiency and Editing

---

The two PHUs experienced differences in time savings

Time for editing also varied

Approximately 3 errors per scribed interaction

Common error types:

- Incorrect or missing proper nouns (dates, locations, restaurants, etc.)
- Omission of important case details
- Occasional mistranscriptions with accents or rapid speech

# User Experience and Perceptions

---

## Survey participants generally expressed positive experiences:

- Useful
- Easy to use and navigate
- Accurate
- Made documentation more efficient

## Themes from focus groups:

- Positive and promising impact
- Flexibility and adaptability of the tool
- Building trust in technology
- Changes in practice and culture

# Professional Standards and AI Scribe

Consent

Privacy

Accountability

## AI SCRIBE GUIDANCE TIPS

As AI “scribe” options have quickly proliferated, there are a range of issues that physicians should consider when assessing a vendor’s proposed solution. We have created a list of things to consider to assist in your decision making around AI, including vendor contracts. If you require assistance reviewing the contractual terms, OMA will review any AI contract submitted to legal.affairs@oma.on.ca and flag contractual issues for your consideration.

### Intro

AI scribe solutions hold a lot of potential to support and improve your day-to-day practice by reducing some of your administrative burden so that you can spend more time with your patients. While adopting a new technology solution, however, it’s important to keep in mind your legal and professional obligations.

### Your obligations

As a physician, the Personal Health Information Protection Act (PHIPA) applies to you. As a physician, you are also custodians of health information under that law. As well, CPSO policy on recording and confidentiality, as well as general rules around professionalism, continue to apply.

### STEP 1: Choosing a Vendor – Contractual Terms

When considering working with an AI scribe, keep the following in mind in looking at the contract terms:

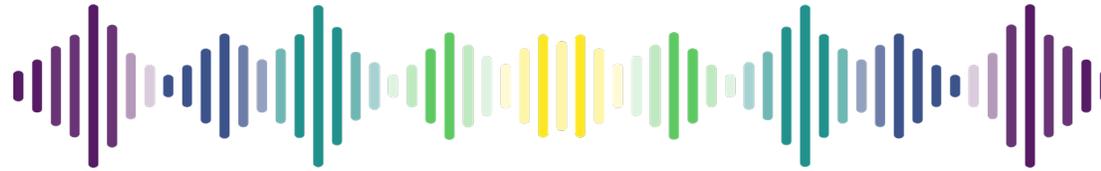

- **Ensure PHIPA Compliance:** Any vendor should generally attest that they are compliant within the contract terms. If in doubt, contact OMA Legal or the OMA Privacy Officer.
- **Restrictions on Use:** Vendors should clearly state that they will not use your patient information (PHI) except as required to provide the service. They should also state that they will not disclose PHI to anyone other than the physician.
- **Data Retention:** Recordings and Transcripts should not be retained beyond the minimum time required to perform the service, and in no case greater than 90 days.
- **De-identification:** De-identification of PHI for commercial use requires de-identification in your privacy policy.
- **Data Residency:** If data is held outside of Ontario, notice of such must be provided in your publicly available privacy policy.

# Trust

**“I think it was a little bit of learning to trust technology. I know the first couple of investigations I did, I was just keeping my regular notes, writing down every single thing I could, and as I started to trust that it would actually pick up relevant information, I decreased some of the physical notes I was making. So definitely it was a little bit of learning to trust the technology.” – Focus Group Participant**

# Impact on Workflow

**“If I had 2 or 3 phone calls back-to-back, I didn’t have to worry about documenting this phone call because I would forget what I said in this phone call when I would move onto another phone call. It enabled me to do back-to-back phone calls a little bit more quickly. I know myself, my brain won’t remember things if I don’t write it down.” – Focus Group Participant**

**“With the scribe, I could finish a phone call at 4:00 or 4:30, close it all down because I knew the scribe had the transcript of what everybody said and I had my minimal notes, and I could chart the next morning. So I didn’t have to stay extra late to finish off a late phone call, which was different for me.” – Focus Group Participant**

# ROI ?

---

- Inputs: licenses, onboarding time, privacy/security assurance, change mgmt.
- Track avoidable rework from incomplete notes
- True ROI limited until data integration with case management systems reduces duplicate entry
- Benefits: minutes saved × case volume; improved completeness; reduced after-hours work.
- Value of information: faster, clearer narratives aid decision making
- Sensitivity: model ranges of time savings; scenario plan scale-up.
- Consider surge scenarios where capacity is constrained

[Image Source: Microsoft stock image]

# What's Next

---

- Share completed analysis and publish open tools (time log, survey, focus group guide).
- Share implementation tools/supports for broader public health workflows and Scribe solutions.
- Share de-identified artifacts & templates
- Continue pilot, consider broadening types of diseases and other health unit programs
- Collaborate: multi-jurisdiction test beds with shared metrics
- Standardize evaluation to compare across programs

**“Positive overall impression of AI integration into everyday work. It was easy to use and has the potential to increase efficiency and accuracy of work.” – User Survey Respondent**

# Looking to the Horizon – AI scribe and Other Tools in Public Health
