The intersections of substance use and gender-based violence: Strategies and resources for Public Health Nurses

PHN PREP JANUARY 14, 2026

COLLEEN VARCOE, RN, PHD, PROFESSOR EMERITUS, UBC NURSING

NANCY LIPSKY, PROGRAM MANAGER, EQUIP HEALTH CARE, UBC

Acknowledging the diversity of lands we live on, and the First Peoples who have stewarded those lands, and our collective obligation to mitigate the ongoing colonial violence against those people and lands.

Content notes

This presentation references gender-based violence, trauma and substance use stigma.

These themes can be difficult, even for those who work in this field every day.

Please engage in ways that feel supportive to you.

Disclaimer: This presentation was created by its author and/or external organization. It will be published on the Public Health Ontario (PHO) website for public use as outlined in our Website Terms of Use. PHO is not the owner of this content. Learning Objectives

By the end of this event, participants will be able to:

1. Identify the key dynamics linking gender-based violence and substance use
2. Describe the impact of these dynamics on health and health care, and the implications for public health practice
3. Select resources and tools for use in further strengthening their practice and that of others

The screenshot displays the PHN-PREP website interface. At the top, a dark blue navigation bar contains the PHN-PREP logo and menu items: About, Education, Resources, Research, Publications, and Events. Below the navigation bar, a light gray section contains the text: "To refine your search of the guidance resources, please click on one or more of the following search terms:". This is followed by a grid of search filter buttons: All, Child Maltreatment Prevention, COVID-19, eHealth, Intimate Partner Violence (IPV), Mental Health, Parenting, Pregnancy, Reflective Supervision, Therapeutic Nurse-Client Relationship, Trauma-and Violence-Informed Care (TVIC), and Vaccination. Below the filters, three resource cards are visible, each with a thumbnail image and a title. The first card is titled "Prioritizing safety in intimate partner violence contexts through a trauma- and violence-informed care lens". The second card is titled "Promoting the Safety of Clients Experiencing Intimate Partner Violence During a Pandemic or Other Public Health Emergencies". The third card is titled "Assessment and Response to Intimate Partner Violence by Public Health Nurses".

Research in Violence and Inequity

Studies about Violence

- ER Nursing practice in relation to violence
- Women's experiences of system responses
- Violence/HIV risks for rural and Indigenous women
- What are the health effects of intimate partner violence (BC, ON, NB)?

Can interventions with individual women who have experienced partner violence improve health?

- Pilot ON
- Pilot NB
- Reclaiming our Spirits (BC)
- RCT
- Implementation

Studies about Equity

- What shapes access to care for diverse people (e.g. single mothers, women in rural settings, Indigenous people)?
- What is equity oriented health care?

Can an organizational intervention improve care?

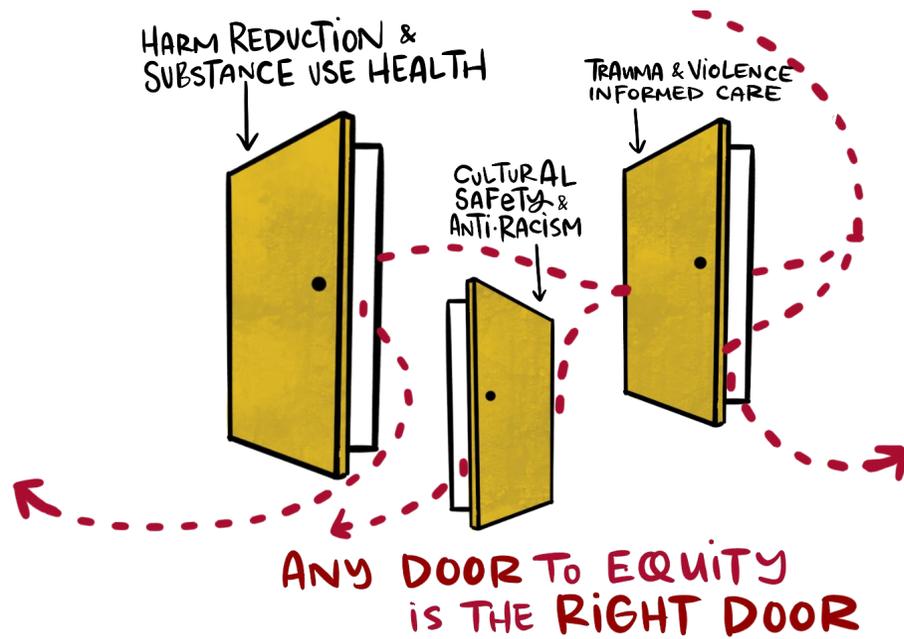

Key Dimensions of Equity-Oriented Care

↔
Tailored to context and responsive to inequities

10 Strategies for Equity-Oriented System Improvement

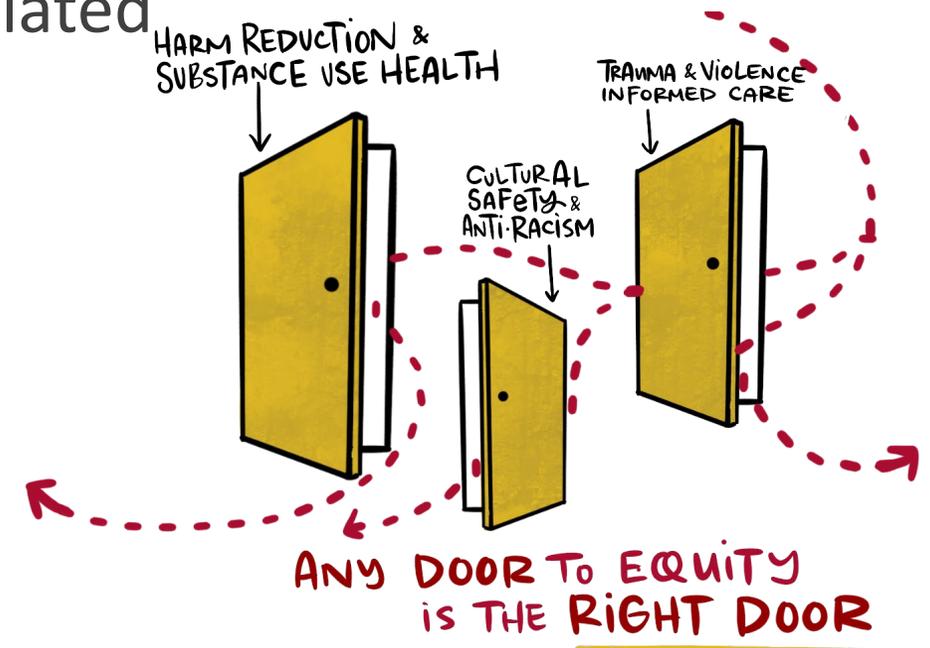

1. Explicitly commit to equity
2. Develop supportive organizational structures, policies, and processes
3. Re-vision the use of time
4. Attend to power differentials
5. Tailor care, programs and services to local contexts
6. Actively counter racism and discrimination
7. Promote meaningful community and patient engagement
8. Tailor care to address inter-related forms of violence
9. Enhance access to the social determinants of health
10. Optimize use of place and space

Challenges at the intersections of substance use and gender-based violence (GBV)

Context: widening social inequities, regressive drug policy, widespread racism, fraying social safety net, toxic drug supply with >1,000 related deaths per year in one province

Challenges: GBV services underfunded and siloed from health; rising rates of GBV, widespread substance use stigma

Equipping the GBV Sector for Substance Use Health

Ending Violence ASSOCIATION OF BC

PRACTICE IN THE CHAT

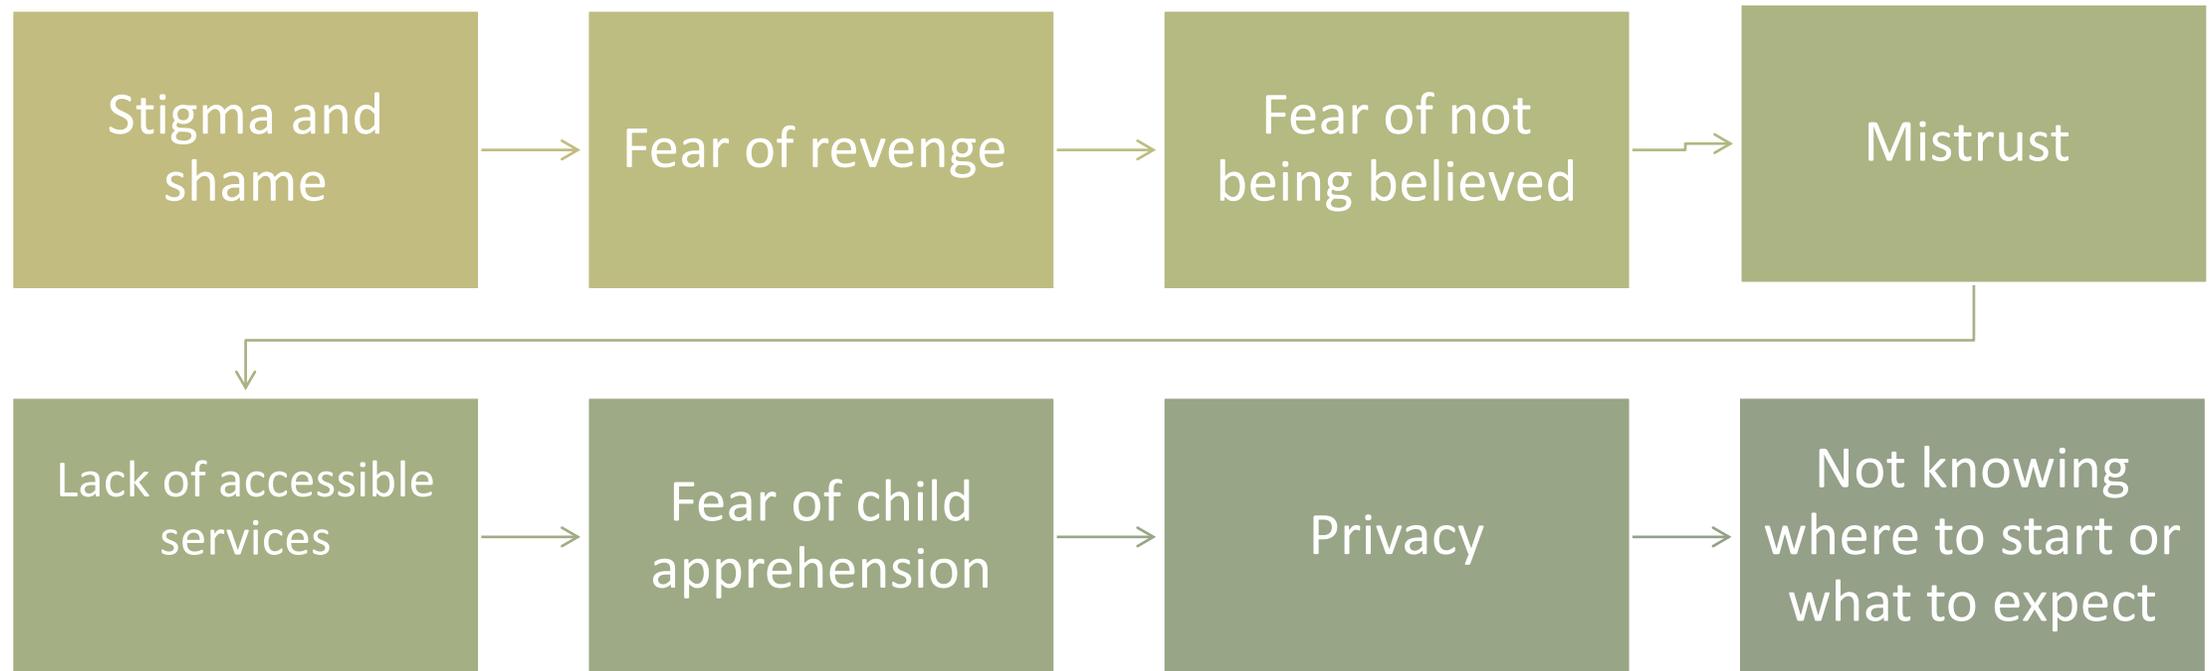

EQUIP's uptake of Substance Use Health

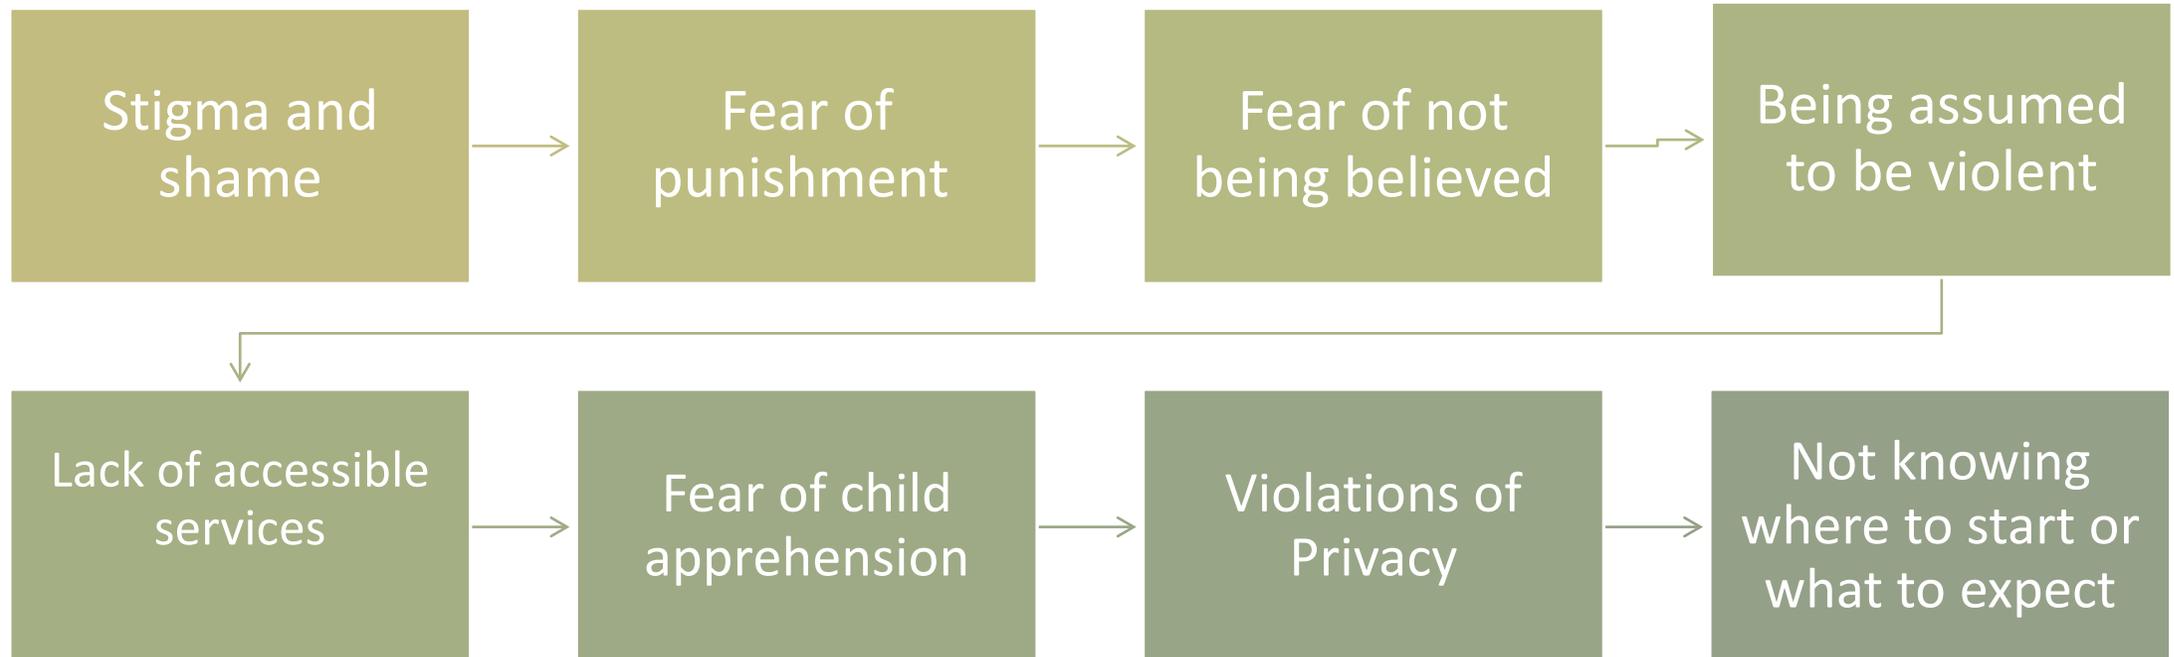

- Not “abstinence only”
- Focus on the spectrum of health effects, not ‘addiction’ and not just those with a diagnosis of “substance use disorder”
- Attends to systemic conditions and lack of choice
- Focuses on substance use as **learned**, not disease, not moral failing
- ‘nothing about us without us’ (with gratitude to the disability movement)

Barriers to Support for Women Experiencing IPV

Barriers to support for people using or assumed to be using substances in ways that harm health

Substance use-specific considerations

- Substance use does not **cause** violence
- Substance use does not **excuse** violence
- Substance use can be part of the dynamics of an abusive relationship in diverse ways (e.g., forced to use, prevented from using, being trafficked for substances)
- Each substance is stigmatized differently, and people are stigmatized differently depending on their social positions and privileges (e.g., income, education, perceived ethnicity)

The Intersecting Risks of Violence and HIV for Rural Aboriginal Women in a Neo-Colonial Canadian Context

Colleen Varcoe, RN, PhD, Associate Professor, School of Nursing, University of British Columbia

Sheila Dick, BEd, Counsellor/Family Support Worker, Canim Lake Band, Tsq'escenemc Nation

ABSTRACT

An ethnographic study looking at the intersecting risks of violence and human immunodeficiency virus (HIV) for rural women shows that the neo-colonial and racist context of Canadian society creates particular challenges for Aboriginal women. This article focuses on the experiences of the Aboriginal women who took part in the study. These women's experiences of violence occurred within a rural context of poverty and declining economic resources, and within a historical context of colonial abuses and cultural disruptions. Consequently, the women's lives were often characterized by disconnection from family and community, making them vulnerable to further violence and exploitation. Social support programs in this rural setting were limited and access was sometimes problematic. Understanding how the intersecting dynamics of gender, rural living, poverty, racism, and colonialism create risk for Aboriginal women provides a basis for developing policies that aim to strengthen the well-being of women, particularly their economic well being. It also highlights the need for an anti-racist agenda within the social service and health care sectors and at all levels of government.

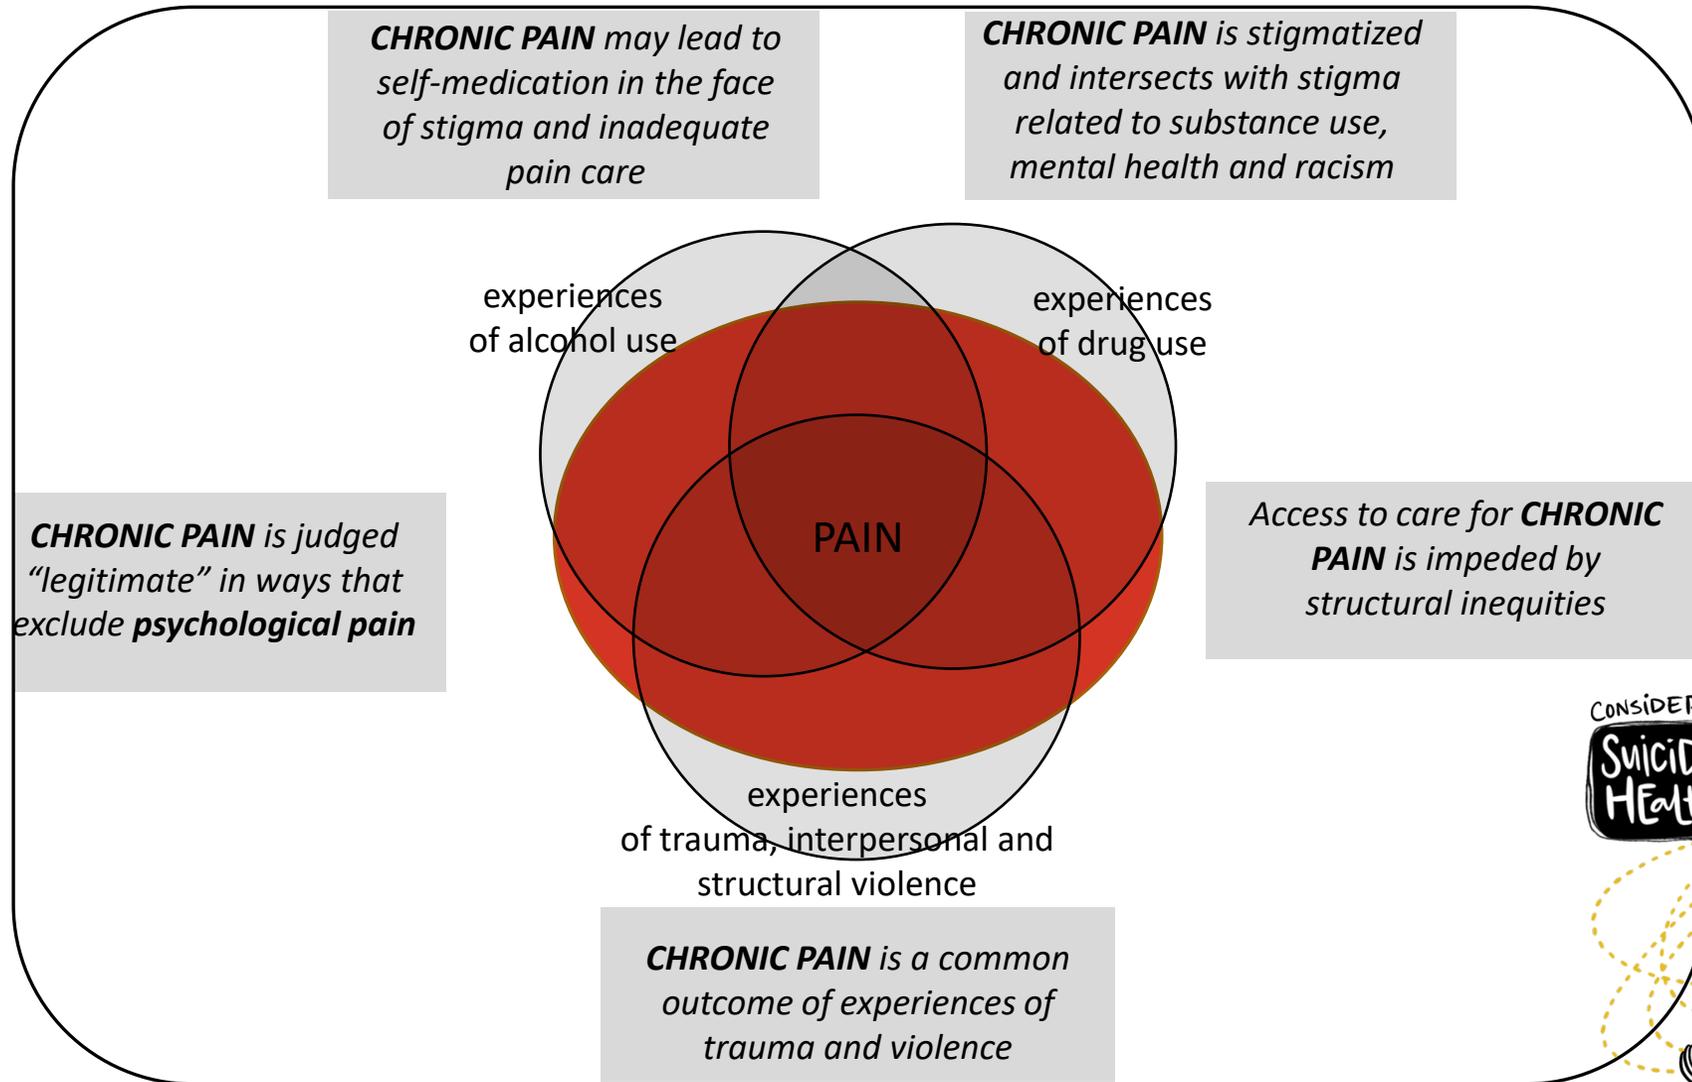

KEYWORDS

Violence against women, HIV, rural health, colonialism, gender, rural living, poverty, racism, Aboriginal women

INTRODUCTION

Because Aboriginal women face more structural inequities, they are at greater risk of both experiencing violence (Amnesty International Canada, 2004; Brownridge, 2003; Statistics Canada, 2005) and contracting human immunodeficiency virus (HIV) (Craib et al., 2003; Public Health Agency of Canada, 2006) than the general Canadian population. For instance, Aboriginal women aged 25–44 are five times more likely to die of violence than other Canadian women (Amnesty

as compared to 16 per cent for non-Aboriginal women (Desmeules et al., 2003). Rural women face particular challenges related to poverty (Ross, Scott & Smith, 2000; Sutherns, McPhedran & Haworth-Brockman, 2004) and intimate partner violence (Biesenthal, Sproule & Plocica, 1997; Levett & Johnson, 1997) due to their isolation and because of limited economic opportunities and services in rural locales. Thus, Aboriginal women living in rural areas face multiple and intersecting forms of oppression. However,

Pain is often at the center of the intersections among trauma, violence, substance use and stigma

Bring substance use health into TVIC

PRINCIPLE	KEY SUBSTANCE USE CONSIDERATIONS
1. Understand trauma, violence and it's impacts on people's lives and behaviour	<ul style="list-style-type: none">• Base organizational and individual approaches on understanding how substance use can be a tool of abuse, a excuse for violence, a strategy for managing pain...
2. Create emotionally and physically safe environments for all clients and providers	<ul style="list-style-type: none">• Develop policies and approaches to enable service provision to people at all levels of substance use; extend non-judgemental unconditional positive regard to all
3. Foster opportunities for choice, collaboration and connection	<ul style="list-style-type: none">• Identify and support client goals related to substance use health; Lobby for increased availability of VOLUNTARY treatment
4. Use a strengths-based and capacity building approach to support clients	<ul style="list-style-type: none">• Recognize and acknowledge the challenges of the intersections among trauma, violence, pain, substance use and stigma

Resources

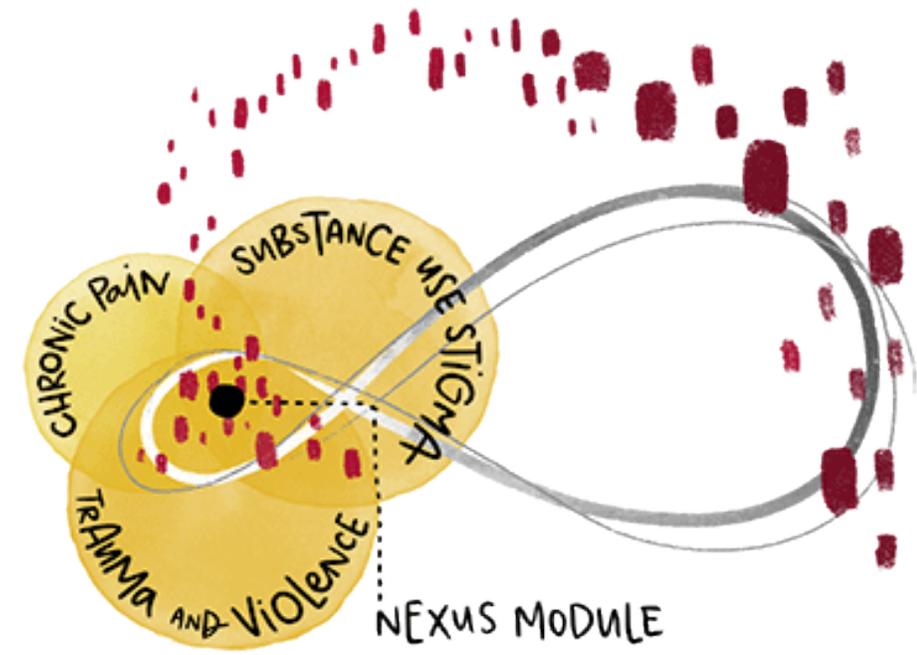

The Nexus Module:

<https://equiphealthcare.ca/online-courses/nexus-module/>

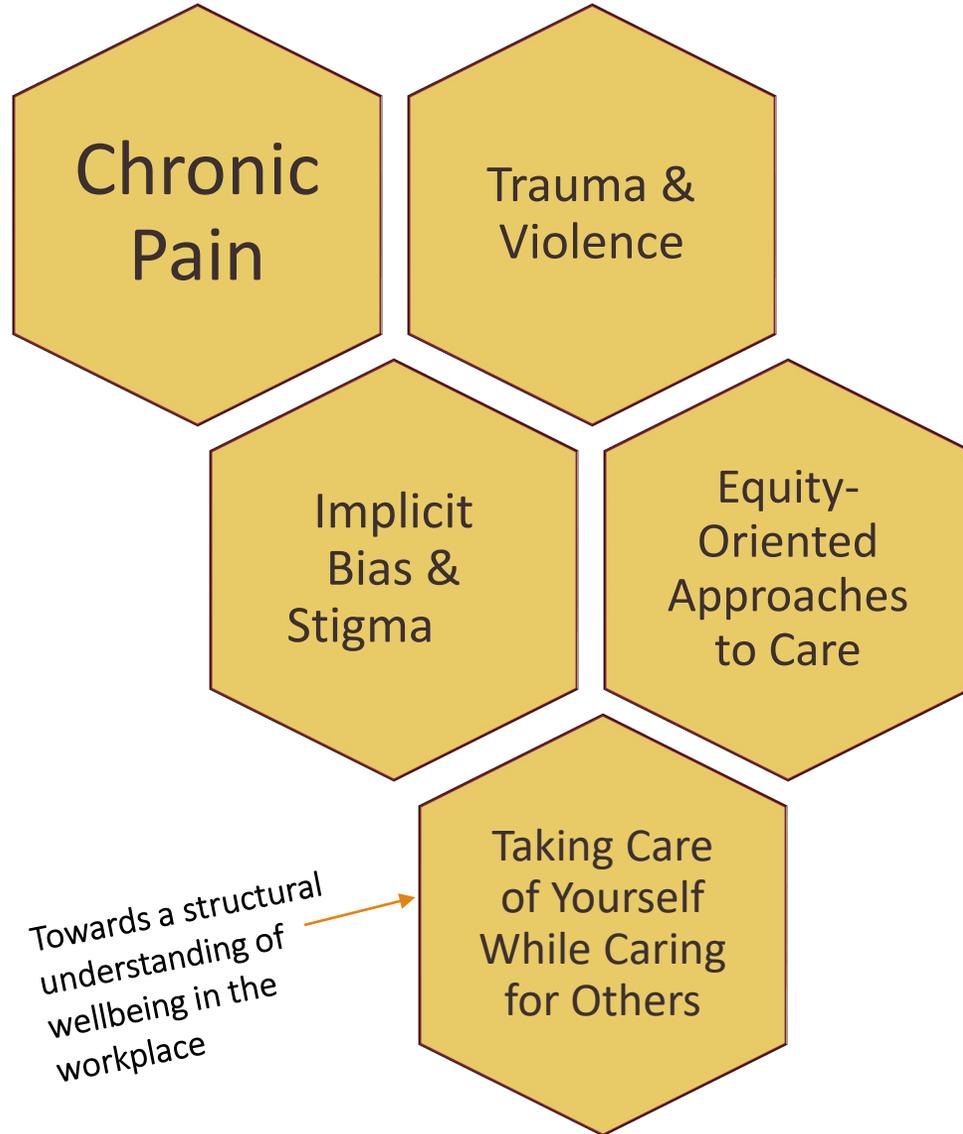

Invites health care and social service providers to:

- consider the intersections of trauma, violence, substance use stigma, and chronic pain;
- reflect on their assumptions and potential for biases;
- consider the perspectives of people experiencing both substance use stigma and pain; and
- bring a structural lens to understanding wellbeing in the workplace

The Nexus Module has 7 sections, with **embedded videos, case-based activities, interactive quizzes,** and links to further resources throughout. After completing unit 7, successfully completing a brief quiz will provide a **Certificate of Completion.**

5.8 Cultural Safety

Cultural safety is an approach to practice based on understanding the impacts of inequitable power relations, racism, discrimination, and historical and current health as well as health care inequities. Cultural safety is an anti-racist, anti-oppressive and anti-discriminatory stance.

It shifts the attention away from “cultural differences” as the source of a problem to the culture of health care as the site where health providers can take action to create safety for all.

It moves beyond cultural sensitivity to place responsibility on care providers to create culturally safe environments.

It foregrounds social justice goals as essential to health care, with the aim of shaping health care practices, policies and organizations. For example, intake forms, visiting policies and even the physical layout can make people feel more or less welcome and respected. Think about

Putting Language Into Practice: Conversations about Gender-Based Violence and Substance Use Stigma

EQUIP Health Care
Equity-Oriented, Intersectional, Person-First, Strength-Based

Putting Language Into Practice: Conversations about Gender-Based Violence and Substance Use Stigma

An Equity-Oriented Approach to Language

An Equity-Oriented, Intersectional Approach to Supporting Those Who... experience GBV 1

2 use GBV

3 use substances in the context of GBV

A key tool for EOC is stigma reduction. Stigma can be conveyed through the words and phrases we use. Small shifts in the way we speak to and about people can make a big difference! This tool provides an equity-oriented, person-first, and asset-based starting place for better conversations, with examples and guidance on how to engage with people who experience stigma and discrimination related to their substance use, experiences of gender-based violence (GBV) or both.

Guiding Principles

- Different terms in different settings**
 - Reflect on what language works in your sector (e.g., patient, client, survivor when referring to service users).
 - The meaning and interpretation of certain words will change based on culture, context, and understanding.
- Person-first, asset-based language**
 - Prioritize the person instead of certain characteristics, circumstances, or experiences.
 - Focus on the strengths and knowledge of people, communities, and sectors, rather than deficits.
- Respect people's self-identification**
 - Avoid assumptions about how people want to identify. People may use terms that you would not use, but that make sense to them. Mirror their language (e.g., victim, survivor, etc.).
- Reflective, not corrective approach**
 - Think about how you refer to people and their behaviour and how you ask about their needs, experiences, and decisions. Make sure your own biases and assumptions aren't coming into play when you invite people to share their concerns and priorities with you.
 - It is important to encourage positive change and not be punitive when people make mistakes. We all make mistakes as we learn new things.
- Recognize that words have power**
 - Be aware of how some words and phrases can be taken as "othering" (i.e., positioning a person or group as different or separate) and/or as exerting dominance or power, (e.g. by making demands or giving orders instead of discussing options). Approaching all interactions with humility is a strength.

1

Language Matters

Substance Use Health (SUH) was developed by CAPSA and can be used in place of, or alongside the term Substance Use. SUH recognizes that substance use occurs on a spectrum and ranges from no use to various health risks and benefits, to use that can negatively impact a person's health and life. SUH is a strengths-based approach that focuses on supporting people's substance use health goals, including but not limited to managed use, reduced use, or abstinence. The following shows some examples of person-first, strength-based language:

WHY?

AVOID THIS:	WHY?	TRY THIS:
"Problematic substance use," "addiction," "dependence," "habit," "abuse," or "reuse"	This framing is value-laden and reinforces stigma. Regular substance use is not inherently unhealthy.	"Substance use health concern," "self-identified heavy use," "heavy use over time," "regular substance use," "person who uses substances regularly," "substance use that harms health"
"Opioid crisis," "overdose crisis," or "accidental overdose"	The current crisis involves diverse substances, not only opioids. Harms include overdoses and deaths. The term overdose can blame individuals. Centering the toxic drug supply better recognizes the context in which substance use harms are occurring and the policies that drive it.	"Toxic drug poisoning crisis," "drug toxicity crisis," "toxic drug overdose crisis," "substance use medical emergency"
"Junkie," "addict," "drug abuser," or "drug user"	These are stigmatizing labels that evoke inaccurate images of people who use substances as unstable and unworthy of support.	Person first language such as "people/person" who use(s) substances (as above), person with lived/living experience of substance use
"Dirty test results," "clean test results," or "clean and sober"	Avoid slang. Words such as "clean" and "dirty" evoke certain imagery that contributes to shame and stigma.	"Positive test results," "negative test results," "not using..." "reducing use of..."
"Drug seeking"	Assumes that people exaggerate or even invent pain to procure substances and is highly stigmatizing and dehumanizing.	"Presented for uncontrolled pain"
"Victim"	Focusing on the person and their strengths in the face of violence sets the stage for a strengths-based approach and is non-judgmental.	"Survivor"
"Perpetrator" or "abuser"	Move towards humanizing language for everyone, without removing accountability.	"Person who used/used violence," "Person who caused/caused harm"
"Battered woman," "abused," or "at risk"	This language is deficit based and reduces a person to one aspect of their lived experience. Person-first language shifts focus onto people's experiences.	"Has a history of..." "living with..." "experiences of..." "has survived..."
"They don't want help," "non-compliant," "unmotivated," or "resistant client"	Reinforces stigma, blames individuals, and is deficit based. Person-first language shifts attention to how systems can better meet needs.	"Our help isn't meeting their needs," "care is unsuitable," "unable to adhere to/forcing barriers"
"Refuses to leave partner"	Positions "leaving" as a condition for receiving care and assumes that the survivor wants to leave (versus, for example, wanting the violence to end) or can leave safely, even if they want to.	"Requires support/referral for safety planning"

2

Intersectional Considerations

Harmful assumptions about substance use and GBV experiences are often compounded by assumptions based on people's social positions.

DON'T ASSUME... that people choose to use substances.

Remember that people use substances for a variety of reasons, including to help relieve pain and cope with experiences of trauma and systemic/structural violence. Reserve judgement and practice with compassion, humility, respect, and curiosity.

DON'T ASSUME... that people living in poverty or faced with homelessness are likely to be violent or use substances.

Remember that people who don't have access to private transportation and private homes/spaces are more visible to the public, and their use of substances or violence may be more visible.

DON'T ASSUME... that someone's culture or religion determines their likelihood of using or experiencing violence.

Remember that misogyny and patriarchy are at the roots of gender-based violence against women.

DON'T ASSUME... that because a person's culture or religion prohibits substance use that substance use will not occur.

Remember that people from all backgrounds can experience substance use health concerns.

DON'T ASSUME... the high rates of violence against Indigenous women mean that Indigenous Peoples are generally more violent.

Remember that such violence is also perpetuated by non-Indigenous people¹ and that violence against Indigenous women is a failure at every level of the system. Structural violence, especially colonialism and racism, have created conditions where Indigenous people are over-surveilled, over-represented in harmful systems like child welfare and correctional facilities, and are more likely to experience poverty, violence and pain due, for example, to barriers to education, employment and housing and intergenerational trauma from Residential Schools.

DON'T ASSUME... Indigenous people use substances more than the general population.

Remember that many Indigenous people do not use alcohol or other drugs.² Data indicates that Indigenous people in BC consume less alcohol per capita than the general population³ and that 35.3% of Indigenous adults abstained from alcohol in the last 12 months, compared to only 20.7% of Canadians who do not self-identify as Indigenous.⁴

How to put the Guiding Principles into Action in Your Conversations

Here are some suggestions of how to apply the guiding principles into your everyday conversations. They are grouped according to different stages of an interaction.

At the start:

- Make sure people feel safe and comfortable:**
 - I'm so glad you came here today. Welcome.
 - Would you be more comfortable in the armchair or the one with the straight back? Is the lighting ok?
 - Is it helpful to you to be able to see the door? Would you like it open, partially closed, or closed?

Easing into the conversation:

- Try sharing non-judgmental observations** along with asking questions. For example:
 - Many people who experience violence use substances or many people who are worried about their substance use have experienced violence.
 - People often smoke for a reason.
 - Many people who come here will share that they use substances, like alcohol or drugs, to deal with the stresses they face. How do you deal with feeling overwhelmed?

Asking difficult questions:

- Let people know they can choose** to share as much, or as little, as they want. Also help them see their strengths; for example:
 - When people are in pain, scared or sad, it can be hard to talk about. I'm going to ask a personal question. You don't have to answer if it doesn't feel right.
 - Where does your strength come from?
 - Have you experienced violence, abuse, or fear in your relationship? Has your partner tried to control you, or things important to you (like children or finances)? Is there anything you want to say about your experiences?

Validate:

- Acknowledge people's experiences.** For example:
 - You face a lot of challenges, and you are still able to (parent, work, study, keep yourself safe...). That takes a lot of strength and skill.

Taking care:

- Take time to debrief and acknowledge** that these conversations can be stressful and difficult, and can prompt different reactions.
 - We've been talking now for half an hour. Would you like to go outside for a break or to have a cigarette (if they smoke)? Just come back when you are ready to continue – I'll be right here.

Closing:

- Coming back for the next visit is often difficult** because of what we talked about today, so if you feel like that, please know that it's normal and when you get here, we can have a less heavy conversation if that would be better for you.

Post-Interaction Reflection:

- Reflect** on why you may or may not have asked certain questions. Why are you asking a client about substance use and/or violence by a partner? What are the potential impacts of asking about and documenting these issues?

NAVIGATING CONVERSATIONS AT THE INTERSECTION OF GENDER-BASED VIOLENCE AND SUBSTANCE USE

An Equity-Oriented, Intersectional Approach to Supporting Those Who...

- 1 use GBV
- 2 experience GBV
- 3 use substances in the context of GBV

Guiding Principles

- **Person first, asset-based language**
 - Prioritize the person instead of certain characteristics, circumstances, or experiences.
 - Focus on the strengths and knowledge of people, communities, and sectors, rather than deficits.
- **Respecting people's self-identification**
 - Avoid assumptions about how people want to identify. People may use terms that you would not use, but that make sense to them.
- **Different terms in different settings**
 - Reflect on what language works in your sector (e.g., patient, client, survivor for service users).
 - The meaning and interpretation of certain words will change based on culture, context, and understanding.
- **Reflective, not corrective approach**
 - While the terms we suggest may not work in every case, reflect on how you are referring to people and their behaviour and how you are inquiring about their needs, experiences, and decisions. It is important to encourage positive change and not be punitive when people make mistakes. We all make mistakes as we learn new things.
- **Recognize that power is "baked in" to language**
 - Be aware of how some words and phrases can be taken as "othering" (i.e., positioning a person or group as different or separate) and/or as exerting dominance or power, (e.g., by making demands or giving orders instead of discussing options). Approaching all interactions with humility is a strength.
