Public Health Agencies

Public Health Agency of Canada | canada.ca

- 2019 novel coronavirus: outbreak update
  - February 25, 2021, 19:00 EST, 858,217 cases of COVID-19 have been confirmed in Canada and there are currently 30,335 active cases. 21,865 people have died of COVID-19. Individuals tested: 24,030,155.
  - February 24, 2021, 19:00 EST, 855,126 cases of COVID-19 have been confirmed in Canada and there are currently 30,393 active cases. 21,807 people have died of COVID-19. Individuals tested: 23,948,515.
  - February 23, 2021, 19:00 EST, 852,269 cases of COVID-19 have been confirmed in Canada and there are currently 30,677 active cases. 21,762 people have died of COVID-19. Individuals tested: 23,880,652.

- Statement from the Chief Public Health Officer of Canada [02-25-2021]
  - “Ongoing community transmission, particularly where infection rates are high or more contagious variants are spreading, presents a persistent risk for new infections and introductions into high-risk populations. Settings including health and long-term care settings, congregate living settings such as correctional facilities and shelters, and other close-living settings, can further amplify spread if virus introduction sparks an outbreak. In addition, some populations in these settings may be at higher risk of more severe disease or outcomes. This underscores the importance of reducing infection rates across the community to help prevent disease introductions that lead to outbreaks in closed and high-risk settings. Accordingly, several provinces have seen a decreased number and smaller size of outbreaks across a range of settings as community infection rates fell.”

Corona virus Disease 2019 (COVID-19):

- Coronavirus disease (COVID-19) weekly epidemiological update [02-25-2021]
- COVID-19 oxygen emergency impacting more than half a million people in low- and middle-income countries every day, as demand surges [02-25-2021]
- The life-saving power of medical oxygen: The COVID-19 pandemic has accelerated global demand for oxygen and made the delivery of oxygen supplies more urgent. WHO is working in the most vulnerable countries to scale up oxygen supply [02-25-2021]
- WHO Director-General’s opening remarks at Member States briefing on COVID-19 [02-25-2021]
  - “Vaccines have given us all hope. But it is critical to remember that vaccines by themselves will not end this pandemic. Vaccines are only one piece of the puzzle. We must also continue to expand access to rapid diagnostics, oxygen and dexamethasone. Ongoing research and development for new tools is also vital. And we must continue to apply the proven public health measures that many countries have used to successfully prevent or control transmission for more than a year. We must continue avoiding crowds and keeping up physical distancing, masks, ventilation and hand hygiene, alongside robust programmes to test, trace, isolate and treat. As we have already seen, if we let down our guard too quickly, if we rush to re-open our economies and throw public health measures aside, the virus will come roaring back. We cannot keep lurching from lockdown to lockdown, stumbling between crisis and carelessness. As much as we may want it to, this virus will not suddenly disappear. We must take a long-term, sustainable approach, following necessary public health measures to drive down transmission, while protecting livelihoods and getting our children back into school. We must continue to take special care to protect our most vulnerable, while maintaining essential health services, including for mental health. Many countries have managed to keep the worst of this pandemic at bay. Following public health measures works. There are no shortcuts.”
