New Content (updated daily)

Public Health Agencies

Public Health Agency of Canada | canada.ca

COVID-19 is a serious health threat, and the situation is evolving daily. The risk varies between and within communities, but given the number of cases in Canada, the risk to Canadians is considered high.

- **2019 novel coronavirus: outbreak update**
  - **August 11, 2021**, 19:00 EST, **1,445,305** cases of COVID-19 have been confirmed in Canada and there are currently **13,553** active cases. **26,688** people have died of COVID-19. Individuals tested: **39,125,109**.
  - **August 10, 2021**, 19:00 EST, **1,443,433** cases of COVID-19 have been confirmed in Canada and there are currently **12,548** active cases. **26,683** people have died of COVID-19. Individuals tested: **39,069,975**.
  - **August 9, 2021**, 19:00 EST, **1,442,087** cases of COVID-19 have been confirmed in Canada and there are currently **12,052** active cases. **26,678** people have died of COVID-19. Individuals tested: **39,024,358**.

- **COVID-19 vaccination in Canada**
  - As of **August 12, 2021**, 11:00 EST, there have been **51,035,500** vaccine doses administered.
  - As of **August 11, 2021**, 19:00 EST, there have been **50,942,196** vaccine doses administered.
  - As of **August 11, 2021**, 14:00 EST, there have been **50,894,647** vaccine doses administered.

- **Government of Canada funds research on responding to possible adverse events following COVID-19 vaccination** [08-12-2021]

- **Statement from the Chief Public Health Officer of Canada** [08-11-2021]
  - “Since the start of the pandemic, there have been 1,443,433 cases of COVID-19 and 26,683 deaths reported in Canada; these cumulative numbers tell us about the overall burden of COVID-19 illness to date. Four variants of concern (VOCs) in Canada, B.1.1.7 (Alpha), B.1.351 (Beta), P.1 (Gamma), and B.1.617.2 (Delta), have been detected in most provinces and territories. At the national level, the Delta variant currently accounts for the majority of recently reported VOC cases. Regardless of which SARS-CoV-2 variants are predominating in an area, we know that vaccination, in combination with public health and individual measures, continue to work to reduce the spread of COVID-19. At the present time, those who are unvaccinated are at greatest risk of infection and severe outcomes; however, the spread of the virus in areas with low vaccination coverage presents an ongoing risk for the emergence, and replacement by, new variants. This is why we must remain vigilant to reduce the spread of the virus, especially for variants that have some ability to evade protection from vaccines.”

“We already have many tools to prevent, test for and treat COVID-19, including oxygen, dexamethasone and IL-6 blockers. But we need more, for patients at all ends of the clinical spectrum, from mild to severe disease. And we need health workers that are trained to use them in a safe environment. In October, WHO reported results of the Solidarity Trial, which tested four treatments for COVID-19, involving almost 13,000 patients in 500 hospitals, in 30 countries. That trial showed that the four drugs had little or no effect on hospitalized patients with COVID-19. We expect final results from that trial next month. Today we are pleased to announce the next phase in the Solidarity trial, called Solidarity PLUS. Solidarity PLUS will test three drugs: artesunate, a treatment for severe malaria; imatinib, a drug for certain cancers; and infliximab, a treatment for immune system disorders such as Crohn’s disease. These drugs were chosen by an independent panel of experts that evaluates all the available evidence on all potential therapeutics. The trial involves thousands of researchers at more than 600 hospitals in 52 countries.”
