New Content (updated daily)

Public Health Agencies

Public Health Agency of Canada | canada.ca

COVID-19 is a serious health threat, and the situation is evolving daily. The risk varies between and within communities, but given the number of cases in Canada, the risk to Canadians is considered high.

- **2019 novel coronavirus: outbreak update**
  - **November 2, 2021**, 19:01 EST, 1,720,355 cases of COVID-19 have been confirmed in Canada and there are currently 23,555 active cases. 29,056 people have died of COVID-19. Individuals tested: 46,406,963.
  - **November 1, 2021**, 19:01 EST, 1,718,471 cases of COVID-19 have been confirmed in Canada and there are currently 24,363 active cases. 29,023 people have died of COVID-19. Individuals tested: 46,323,870.
  - **October 31, 2021**, 19:00 EST, 1,716,559 cases of COVID-19 have been confirmed in Canada and there are currently 27,356 active cases. 28,970 people have died of COVID-19. Individuals tested: 46,257,864.

- **COVID-19 vaccination in Canada**
  - As of **November 2, 2021**, 20:00 EST, there have been 58,515,140 vaccine doses administered.
  - As of **November 2, 2021**, 14:00 EST, there have been 58,501,191 vaccine doses administered.
  - As of **November 1, 2021**, 11:00 EST, there have been 58,395,422 vaccine doses administered.

- **Statement from the Council of Chief Medical Officers of Health (CCMOH): COVID-19 vaccination and the use of COVID-19 vaccine boosters** [11-01-2021]
  - “NACI recommends booster doses for some key populations, 6 months or more after a primary series of COVID-19 vaccines approved by Health Canada. The key populations recommended to receive boosters at this time are those at greatest risk of decreased protection over time, and greatest risk of severe illness and outcomes. This also includes some health care providers who received their initial vaccine series with less than 28 days between doses. These health professionals could pose an increased risk of transmission to vulnerable populations, and would leave a critical gap in our health systems should they become ill even with a mild infection.
  - Given there is currently no evidence of widespread waning of protection against severe disease in the general population who have been vaccinated against COVID-19 in Canada, boosters for this group are not required at this time but we will continue to monitor vaccine effectiveness and other data to inform the need in the future.”

- **Statement from the Chief Public Health Officer of Canada** [10-29-2021]
- **NACI Interim guidance on booster COVID-19 vaccine doses in Canada** [10-29-2021]
- **Summary of National Advisory Committee on Immunization (NACI) Statement of October 29, 2021: Interim guidance on booster COVID-19 vaccine doses in Canada** [10-29-2021]
