Coronavirus Disease 2019 (COVID-19), Influenza, & Respiratory Syncytial Virus (RSV)

Updated weekly on Tuesdays, and current as of 3:00 p.m. on the date it was posted.

Note: As of October 17, 2023 this document will include updates for other respiratory diseases of public health concern, primarily influenza and respiratory syncytial virus (RSV).

Additionally, the “Guidelines and Technical documents” section [last updated July 26, 2023] will no longer be updated, but is archived as an appendix at the end of this document.

Moving forward, any news and guidance updates will be cycled through the New Content section below, as always with the dates of the latest additions bolded.

This document is a collation of resources for your reference. For official guidance on COVID-19, Influenza, and RSV in Ontario, please visit the Ministry of Health (COVID-19 | The Flu | RSV).

- Weekly respiratory virus update, week 16, April 2024 [04-26-2024]
- Overview of respiratory virus epidemiology in the EU/EEA weekly overview (week 16, 2024) [04-23-2024]

ECDC and the WHO Regional Office for Europe have jointly developed the European Respiratory Virus Surveillance Summary (ERVISS)

- Syndromic surveillance in primary and secondary care indicates that respiratory activity continues to decrease and has returned to baseline levels in most EU/EEA countries.
  - Seasonal influenza activity at the EU/EEA level continues to decrease.
    - For five consecutive weeks, the primary care pooled test positivity at the EU/EEA level has remained below 10%, with only one country reporting test positivity above the epidemic threshold. Similarly, the pooled test positivity in secondary care was below 10% and continued to decrease.
    - Most countries now report baseline or low levels of influenza intensity and baseline rates of influenza-like illness (ILI). Countries continue to report a mix of geographical spread, indicating continued heterogeneity of influenza activity at country level.
    - In week 16, influenza type B accounted for 83% of the influenza virus detections in the EU/EEA. For four consecutive weeks, more Influenza B than Influenza A was detected, although the detections remain low and continue to decrease, with only one country reporting elevated activity driven by Influenza B.
  - RSV activity remained at low levels in the EU/EEA and in most reporting countries.
  - SARS-CoV-2 activity remained low in all EU/EEA countries.
