Public Health Agencies

Public Health Agency of Canada | canada.ca

- 2019 novel coronavirus: outbreak update
  - July 9, 2020, 19:01 EDT, 106,805 cases of COVID-19 have been confirmed in Canada. 8,749 people have died of COVID-19. Individuals tested: 3,098,193.
  - July 8, 2020, 19:01 EDT, 106,434 cases of COVID-19 have been confirmed in Canada. 8,737 people have died of COVID-19. Individuals tested: 3,055,341.
  - July 7, 2020, 19:00 EDT, 106,167 cases of COVID-19 have been confirmed in Canada. 8,711 people have died of COVID-19. Individuals tested: 3,020,172.

- Statement from the Chief Public Health Officer of Canada [07-10-2020]
  “Resilience is a word that we have all come to understand in a deeper way as we face COVID-19 in our communities. It implies courage, tenacity and collaboration. It is a quality exemplified by people living with HIV and AIDS, and is the theme of this year’s AIDS 2020 international conference, which ends today. As with many events this year, the conference was virtual, bringing together — online — the HIV community, scientists, advocates, health providers and others to celebrate the resilience of those living with and affected by HIV. The conference also examined gaps and advances in HIV prevention, access to care and treatment, and celebrated discoveries, such as “Undetectable = Untransmittable.”

World Health Organization (WHO) | who.int
- Opening remarks at the Member State Briefing on the COVID-19 pandemic [07-09-2020]
  - “The COVID-19 pandemic has left no country untouched. It has humbled all of us. It is often said that disease knows no borders. It does not care about our political differences, and it disregards the distinctions we draw between health and economy, lives and livelihoods. The COVID-19 pandemic has disrupted them all. It has exploited the inequalities in our health systems and the schisms in our societies. It has exposed existing inequities, widening and deepening the cracks between us. This once-in-a-century pandemic has hammered home a critical lesson: when it comes to health, our destinies are intertwined. The virus has upended health systems in some of the world’s wealthiest nations, while some countries that have mounted a successful response have been of modest means. We know that when countries take a comprehensive approach based on fundamental public health measures – such as find, isolate, test and treat cases, and trace and quarantine contacts - the outbreak can be brought under control”
