- 2019 novel coronavirus: outbreak update
  - March 24, 2021, 19:00 EST, 946,370 cases of COVID-19 have been confirmed in Canada and there are currently 37,100 active cases. 22,759 people have died of COVID-19. Individuals tested: 26,858,481.
  - March 23, 2021, 19:00 EST, 942,320 cases of COVID-19 have been confirmed in Canada and there are currently 36,310 active cases. 22,735 people have died of COVID-19. Individuals tested: 26,778,301.
  - March 22, 2021, 19:00 EST, 938,719 cases of COVID-19 have been confirmed in Canada and there are currently 35,844 active cases. 22,716 people have died of COVID-19. Individuals tested: 26,704,383.

- COVID-19 vaccination in Canada
  - As of March 24, 2021, 19:00 EST, there have been 4,393,876 vaccine doses administered.
  - As of March 23, 2021, 18:00 EST, there have been 4,223,272 vaccine doses administered.

- Statement from the Chief Public Health Officer of Canada [03-25-2021]
  - “Updated national data on opioid- and stimulant-related harms in Canada released yesterday demonstrates the broader impacts of the COVID-19 pandemic on the ongoing overdose crisis, with tragic consequences for people who use substances, their families, and communities across the country. Opioid-related overdoses took the lives of 3,351 people from April, near the beginning of the pandemic in Canada, to September 2020. Furthermore, recent reporting from Statistics Canada suggests that overdose deaths may have accounted for some of the higher number of deaths observed in Canada in the fall of 2020.”

- Statement from the Chief Public Health Officer of Canada [03-24-2021]
  - “Today, the World Health Organization (WHO) commemorates World Tuberculosis (TB) Day to raise awareness about the health, social and economic consequences of this disease and to acknowledge the broader impact of COVID-19 for people with TB, including disruptions to essential TB services. This year’s theme is “The Clock is Ticking” – it serves to remind us that time is of the essence if we are to meet commitments to end TB globally. While overall rates of TB are low in Canada, the disease continues to disproportionately affect those who are at risk because they may live in close quarters, experience barriers to health care or have fewer material resources. The COVID-19 pandemic has heightened awareness about the health and social inequities that exist in Canada, and the need to address the social determinants of health that lead
to health disparities. Despite the challenges facing us, Canadians have come together to respond to the COVID-19 crisis in new and innovative ways. Likewise, collaborative and cross-sectoral action centred on a health equity approach will help us reduce rates of TB in Canada, ensuring that everyone has the opportunity to achieve their best health and well-being now and into the future.”

WHO Director-General's opening remarks at the meeting of Strategic Advisory Group of Experts (SAGE) on Immunization [03-22-2021]
  
  “Developing COVID-19 vaccines and manufacturing enough supply already presents an array of challenges. Of course, it’s vaccinations, not vaccines, that stop disease. The scale of what is needed, in terms of numbers of vaccinators, engagement with communities, and ongoing monitoring and health systems strengthening, is truly unprecedented. As you know, vaccine equity is one of the most critical challenges we face, as a matter of justice, and as a matter of controlling the pandemic and driving the global recovery.”
