Coronavirus Disease 2019 (COVID-19)

This update is current as of 3:00 p.m. on the date it was posted.

This document is a collation of resources for your reference. For official guidance on COVID-19 in Ontario, please visit the Ministry of Health.

The next issue of this scan will be posted on December 29, 2020.

Public Health Agencies

Public Health Agency of Canada | canada.ca

- **2019 novel coronavirus: outbreak update**
  - **December 28, 2020**, 19:01 EST, **555,207** cases of COVID-19 have been confirmed in Canada and there are currently **74,113** active cases. **15,121** people have died of COVID-19. Individuals tested: **13,623,182**.
  - **December 27, 2020**, 19:00 EST, **551,891** cases of COVID-19 have been confirmed in Canada and there are currently **79,642** active cases. **15,056** people have died of COVID-19. Individuals tested: **13,438,585**.
  - **December 26, 2020**, 19:01 EST, **546,412** cases of COVID-19 have been confirmed in Canada and there are currently **83,225** active cases. **14,964** people have died of COVID-19. Individuals tested: **13,343,345**.
  - **December 25, 2020**, 19:00 EST, **536,571** cases of COVID-19 have been confirmed in Canada and there are currently **77,737** active cases. **14,768** people have died of COVID-19. Individuals tested: **13,343,345**.
  - **December 24, 2020**, 19:01 EST, **535,150** cases of COVID-19 have been confirmed in Canada and there are currently **76,336** active cases. **14,750** people have died of COVID-19. Individuals tested: **13,343,345**.

- **Statement on the variants of COVID-19 virus found in Ontario [12-26-2020]**
  - “The Government of Canada has a monitoring program in place with the provinces and territories to identify new COVID-19 variants in Canada, such as the ones identified in the United Kingdom and South Africa. While early data suggests that these new variants may be more transmissible, to date there is no evidence that they cause more severe disease or have any impact on antibody response or vaccine effectiveness. More research is required to confirm these findings and the Canadian and global medical, public health and research communities are actively evaluating these mutations. The Public Health Agency of Canada’s (PHAC) National Microbiology Laboratory monitors Canadian cases of COVID-19 with the provinces and territories through ongoing analysis of genomic databases in Canada. Through this ongoing national monitoring, two confirmed cases have been identified in Ontario of the variant observed in the United Kingdom.”

- **Statement from the Chief Public Health Officer of Canada [12-24-2020]**
  - “I am hopeful as I look ahead to 2021. Yesterday, Health Canada authorized Canada’s second COVID-19 vaccine from Moderna, after a thorough, independent review of the evidence for safety, efficacy, and quality requirements for use in Canada. This was followed by the release of the National Advisory Committee on Immunization (NACI)’s recommendations on the use of this vaccine. It is important to remember, however, that initial vaccine supplies will remain limited as vaccine rollout continues in Canada and we must not forget that infection rates remain very high in many parts of..."
the country. While we continue to prepare the way for widespread and lasting control of COVID-19 through safe and effective vaccines, Canadians are urged to continue with individual practices that keep us and our families safer: stay home/self-isolate if you have any symptoms, follow local public health advice and maintain individual protective practices of physical distancing, hand, cough and surface hygiene and wearing a face mask as appropriate (including when you can not consistently keep two metres apart from people outside your immediate household).”

- Statement from the Chief Public Health Officer of Canada [12-23-2020]
  - “This year’s holiday season will be different, and, for some, this may involve increased alcohol consumption. While the best way to avoid short and longer-term risks from alcohol is to not drink, Canadians who consume alcohol can consult Canada’s Low-Risk Alcohol Drinking Guidelines for strategies to help lower the risks. This resource offers information on standard drink sizes, recommended daily and weekly limits, and reminders to avoid alcohol and/or other drugs when pregnant or breastfeeding, and when operating a motor vehicle. And finally, please check with your local public health authority to find out what measures are in place for safer holidays this year, including limits on social gatherings. Remember that the safest way to celebrate this season is with members of your immediate household. This will not only help limit the spread as we continue to see a resurgence of COVID-19 activity in Canada, but the actions you take now could save lives.”

**ECDC: European Centre for Disease Prevention and Control | ecdc.europa.eu**

- Situation update for EU/EEA, and the UK  
  Note: **ECDC switched to a weekly reporting schedule for the COVID-19 situation worldwide and in the EU/EEA and the UK on 17 December 2020. Hence, all daily updates have been discontinued from 14 December.**  
  - As of **week 2020-51, 16 190 212** cases and **403 131** deaths have been reported in the EU/EEA and the UK.  
  - As of **week 2020-50, 15 130 100** cases and **375 930** deaths have been reported in the EU/EEA and the UK.  
  - **December 14, 2020:** Many EU/EEA countries have started to observe a **stabilisation or reductions in case notification rates**. This may be evidence that some countries may have peaked.
• Risk assessment: risk related to spread of new SARS-CoV-2 variants of concern in the EU/EEA [12-29-2020]

World Health Organization (WHO) | who.int

- WHO Director-General’s opening remarks at the media briefing on COVID-19 [12-28-2020]
  - “There will be set backs and new challenges in the year ahead. For example, new variants of COVID-19 and helping people who are tired of the pandemic continue to combat it. At present, we are working closely with scientists all over the world to better understand any and all changes to the virus and how these changes affect its ability to spread or make people sick, or any potential impact on available tests, treatments and vaccines. Specifically we are working with scientists in the UK and South Africa who are carrying out epidemiologic and laboratory studies, which will guide next steps. Science drives our actions. I would like to thank both those countries for testing and tracking new variants and underscore the importance of increasing genomic sequencing capacity worldwide. This means the prompt sharing of epidemiological, virological, and full genome sequence information with WHO and other countries and research teams, including through open-source platforms such as GISAID and others. Only if countries are looking and testing effectively will you be able to pick up variants and adjust strategies to cope. We must ensure that countries are not punished for transparently sharing new scientific findings.”
