

## AT A GLANCE

04/16/2024

# Coronavirus Disease 2019 (COVID-19), Influenza, & Respiratory Syncytial Virus (RSV)

Updated weekly on Tuesdays, and current as of 3:00 p.m. on the date it was posted.

**Note:** *As of October 17, 2023 this document will include updates for other respiratory diseases of public health concern, primarily influenza and respiratory syncytial virus (RSV).*

*Additionally, the “Guidelines and Technical documents” section [last updated July 26, 2023] will no longer be updated, but is archived as an appendix at the end of this document.*

*Moving forward, any news and guidance updates will be cycled through the [New Content](#) section below, as always with the dates of the latest additions **bolded**.*

This document is a collation of resources for your reference. For official guidance on COVID-19, Influenza, and RSV in Ontario, please visit the [Ministry of Health](#) ( [COVID-19](#) | [The Flu](#) | [RSV](#) ).

- [COVID Data Tracker](#) [updated regularly]
- [Respiratory virus index](#) [updated regularly]

## ECDC: European Centre for Disease Prevention and Control | [ecdc.europa.eu](https://ecdc.europa.eu)

- [Weekly respiratory virus update, week 14, April 2024 \[04-15-2024\]](#)
- [Communicable disease threats report, 7 - 13 April 2024, week 15 \[04-12-2024\]](#)
- [Overview of respiratory virus epidemiology in the EU/EEA weekly overview \(week 14, 2024\) \[04-09-2024\]](#)

*ECDC and the WHO Regional Office for Europe have jointly developed the European Respiratory Virus Surveillance Summary (ERVISS)*

- Syndromic surveillance in primary and secondary care indicates that respiratory activity continues to decrease and has returned to baseline levels in most EU/EEA countries.
- Seasonal influenza activity at the EU/EEA level continues to decrease albeit at a slower rate that observed in the previous weeks.
  - For the past three weeks, the primary care pooled test positivity at the EU/EEA level has remained below 10%. Country variation continues to be observed for this indicator, with most countries reporting a decrease in test positivity. Similarly, the pooled test positivity in secondary care was below 10% and continued to decrease.
  - The decrease in seasonal influenza activity was observed earlier this year compared to the trends in the past five years (excluding the 2020/2021 season with almost no activity).
  - Most countries now report low or medium levels of influenza intensity and baseline rates of influenza-like illness (ILI). Countries continue to report a mix of geographical spread, indicating continued heterogeneity of influenza activity at country level.
  - In week 14, influenza type B was the predominant circulating influenza virus in the EU/EEA. For two weeks in a row, more Influenza B than Influenza A was detected, although the detections remain low and continue to decrease.
  - RSV activity continued to decrease to low levels at the EU/EEA level and in most reporting countries.
- SARS-CoV-2 activity remained low in all EU/EEA countries.
- [Interim analysis of COVID-19 vaccine effectiveness against hospitalisation due to COVID-19 and death using electronic health records in eight European countries: first update \[04-08-2024\]](#)
- [Systematic review update on the efficacy, effectiveness and safety of newer and enhanced seasonal influenza vaccines for the prevention of laboratory confirmed influenza in individuals aged 18 years and over \[04-08-2024\]](#)
