Resident and Family Communication/Update

Date______

We are presently watching ______________________________ for signs of a urinary tract infection.

Over the next 24 hours, we will be:

✓ Watching for signs of infection and monitoring temperature.
✓ Encouraging or assisting with increased fluid intake as appropriate.
✓ Encouraging or assisting with increased mobility as appropriate.

Result/Outcome

○ Assessment is finished. There are no signs of infection; no further action is needed.
○ There may be a urinary tract infection. A urine specimen has been sent to the laboratory for testing.
○ Antibiotics have not been started—we are waiting for the laboratory test results.
○ Antibiotics have been started and will be reassessed after the laboratory test results are known.

If you have any questions, please speak to the nurse on duty.
